Mobile Solutions for a New Generation

*Now access your e-mail, calendar, address book
and corporate database from anywhere!*

Products and Services for your PC Companion

Now you can carry your link to your corporate data in your pocket or purse! That's because River Run Software Group provides a suite of products and services that lets you and your Windows CE-based PC Companion access your company information—directly and remotely, over dial-up, circuit-switched cellular and wireless packet data networks.

Full E-Mail Capability

Using the award-winning *Mail on the Run!*® product you can easily send, receive, store, forward and reply to e-mail messages on Microsoft Exchange Server, Lotus Notes, Microsoft Mail, Lotus cc:Mail and Novell GroupWise. You can process your e-mail while on-line, or download selected message headers and mail items for processing offline. The *Mail on the Run!* product has sophisticated support for handling file attachments, automatically converting files into native formats and providing control over the amount of information to be downloaded. Additional features enable you to set filters to process your mail more efficiently and minimize connect time, as well as to download entries from the corporate address book directly into the Contacts application on your PC Companion.

Calendaring and Scheduling

The *All in Sync!*® product allows you to remotely access your mail and synchronize Calendar, Tasks and Contacts databases on your PC Companion with group calendaring and scheduling, tasks and contact data stored in Lotus Notes. Support for Microsoft Schedule+/Outlook and Lotus Organizer® will be available soon.

Mobile Application Builder with Database Access

River Run Software Group and TechBridge Technology Corporation have joined together to create *MobileApps*™, a powerful new

technology for application development. *MobileApps* contains an easy-to-use visual GUI builder, enabling developers to create customized applications for immediate query, data update and data synchronization to any ODBC-compliant database, including Microsoft Access, SQL Server, Lotus Notes, etc.

Multiple Platforms and Connectivity Options

River Run's family of remote enterprise access software products support all versions of PC Companions running all versions of the Windows CE operating system. *Mail on the Run!* also runs on Windows 95 laptops for wireless remote access to LAN-based e-mail systems.

Flexible communication options are a major advantage of River Run's mobile solutions product family. You can access your e-mail, calendar and corporate data directly and over wireline as well as wireless networks.

Professional Services

Let River Run Software Group use their expert and professional services to develop a custom, wireless or wireline remote access solution for you. After all, we're an ISO 9001-certified corporation that's been developing and marketing mobile computing and network management products for Fortune 500 companies since 1989.

WHAT THE SWISS ARMY WOULD CARRY IF IT CARRIED A PEN.

The DigitalWriter Duo is the ultimate writing tool. On one end, a polymeric writing tip gives you a patented "pen-on-paper" feel on your PDA. On the other end, a Cross pen gives you the finest writing experience possible. Try the remarkable DigitalWriter Duo. You'll feel anything but neutral. www.cross-pcg.com or 1-800-510-9660.

Writer®**
Duo

Get the Recognition

Frustrated by the Tiny Keyboard on your HPC?

...**Enter Data** in **Your Own Handwriting!**

Forget the tiny keyboards on H/PCs. Here are six great reasons for you to look at **smARTwriter Plus** for Windows CE.

Accurate & Fast

smARTwriter Plus gives you the best recognition accuracy because it learns your personal handwriting. **smARTwriter Plus'** patented algorithm uses a unique linguistic layer that even further enhances

its accuracy. Recognizes characters five times faster than the actual writing speed.

Adaptable

Write your own way! We won't teach you a new alphabet or make you write as if you were in first grade. **smARTwriter Plus** adapts to your unique writing style immediately after performing a 5 minute QuickTrainer™ session. Correct, change, add or modify any character "on-the-fly" to even further increase recognition accuracy.

Easy to use

Write naturally anywhere on the screen in any size using characters, shortcuts or gestures. Teach the system to recognize "b/c" as "because," or draw a happy face to bring up the word "happy" on your screen.

Hardware Efficient

smARTwriter Plus requires minimal memory space and does not affect the processing speed of your H/PC unit.

Flexible

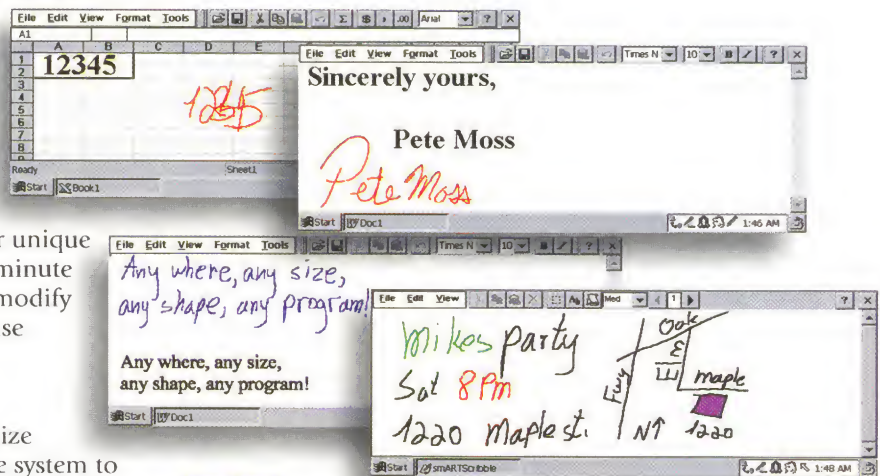

Available at the ART Web site or leading resellers, including those listed below:

smARTwriter Plus comes with **smARTscribble™**, the handy utility that allows you to scribble your thoughts and notes, or even make a quick sketch!

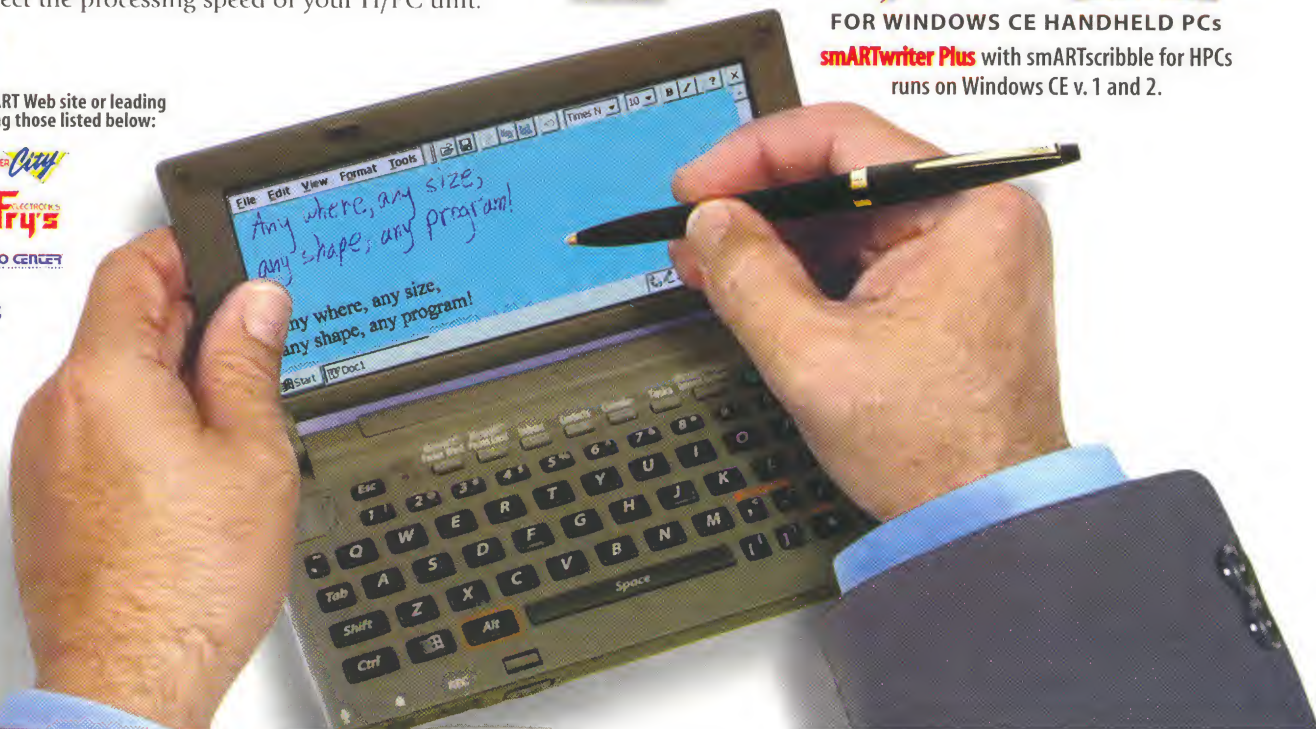

Multilingual

smARTwriter Plus supports all Western European characters so you can write in French, Spanish, German and more.

SmARTwriter®
2.000

FOR WINDOWS CE HANDHELD PCs
smARTwriter Plus with **smARTscribble** for HPCs
runs on Windows CE v. 1 and 2.

That You Deserve!

It's all Here: **Voice**, **Handwriting**, **Macros**, **Gestures ...in the Palm of Your Hand!**

Teach Your Palm-size PC to Recognize Your Handwriting

ART's award-winning **smARTwriter®** software teaches your palm-sized PC to recognize your text and data using your own printed handwriting. Forget struggling to learn how to write with graphical characters. Your Palm-size PC will learn your writing in just a few minutes.

World's Most Accurate Recognition

It's the full version of the handwriting recognition software that earned Mobile Computing's 1st Class Award, and is the 1998 **mobile Readers' Choice Award** winner for Windows CE software. The outstanding out-of-box recognition available gets even better as you use it, and includes ART's proprietary "Ink-Smoothing" to remove the jagged edges caused when writing in a bumpy environment such as in a car or plane.

Easiest to Use

It works with any application. Write any size, anywhere on the screen either upright (portrait) or flat (landscape).

Create Gestures & Macros

Define your own shorthand gestures that can execute unlimited keyboard strokes. Open files, launch applications or insert entire paragraphs into a document by simply writing a custom gesture you create.

WINNER
Golden Gavel Award
June 25, 1998

Use Your Voice to Operate Your Palm-size PC

Fast, accurate voice recognition saves time and increases your productivity. No more scrolling down lists for files, contact names, and phone numbers—just tell your palm-sized PC what you want to do! You can choose from a great collection of commands already built in, or easily create your own library of commands trained to recognize your voice! Some of the incredibly time-saving commands built in include:

- **Open** + a document or note filename to open that document
- **Goto** + an application name to launch that application.
- **Dial** + contact name from your address book to dial a phone number via DTMF tones. Supports multiple numbers.
- **Email** + contact name opens and addresses a new email form.
- **Fax** creates and addresses a new fax form. (Requires bFax Express).
- **Voice Mail** Include a voice message that will be attached to an email.
- **Show Details** + contact name to display the complete contact record in the address book.
- **Get Mail** Launches the Inbox, dials your email server, and checks on-line for new messages.
- **Calendars** launches the Calendar application and specify a view (day, week, month, year, today or agenda).
- **Macro** Execute a user-defined macro. Use it to insert boiler plate text into a document (such as your complete name and address) and teach your Palm-size to work like you do!

ART recognition™
FOR WINDOWS CE PALM-SIZE PCs

Just Say it!

Let smARTcommand® do the work for you!

No need to scroll through your file directory or do the double-tap dance on your cluttered H/PC screen – in seconds you can teach **smARTcommand** to link a single voice command to your most frequently used applications or your favorite documents. Just say the word and your H/PC springs into action!

Includes smARTcontact®!

Say your contact's name to bring up a contact record. Say "dial" and **smARTcontact** to dial your contact's phone number or "email" to launch Internet Explorer and insert your contact's email address. **smARTcontact** works great with the Contact Manager supplied with your Windows CE-based H/PC.

smARTcommand®
FOR WINDOWS CE HANDHELD PCs
smARTcommand with **smARTcontact** for HPCs running Windows CE v. 1.0 or 2.0

BSQUARE
Experts in
Windows CE

From The Editor

Rich Hall

It's been a busy year for Windows CE.

Microsoft followed the late 1997 announcement of Windows CE 2.0 with the release of two new classes of PC Companions: the Palm-size PC and Auto PC. In addition, Microsoft has upgraded Windows CE Services, enhanced its Software Developer's Kit, and increased its support to embedded systems developers. This announces the release of Windows CE 2.1 and the H/PC Pro!

The "Handheld PC Professional Edition" is the name given by Microsoft to the new class of H/PCs using the just-released Windows CE 2.1 operating system and upgraded H/PC applications and utilities. Windows CE 2.1 will be used in more than H/PCs. It will become the operating system for embedded systems, future Palm-size PCs, Auto PCs, and mobile devices that haven't been announced yet.

In this issue we take a first look at the H/PC Professional's updated applications and three of the new H/PC Pros: the Sharp TriPad, the Sharp Mobilon Pro, and the LG Electronics Phenom Express. The description of the products and feedback given is preliminary, based on a quick look at three prototypes and information furnished by Microsoft and the manufacturers. An in-depth look at one or two of the H/PC Pros will be in the January/February 1999 issue of *Handheld PC Magazine*.

We also reviewed the Novatel Wireless Contact (an H/PC with built-in wireless modem), the LG Phenom Ultra (a large-keyboard H/PC), the Compaq C-Series H/PC, and the Sharp HC 4600. These are Windows CE 2.0 H/PCs. No word yet on whether the manufacturers will offer H/PC Pro upgrade chips for these. I'll let you know when I find out.

We also have two very interesting user profiles in this issue, showing how some very mobile PC Companion users keep up with the world. John Kennedy uses his H/PC's infrared port to interface with an Ericsson mobile phone and communicate with the world. Craig Peacock uses an H/PC and Palm-size PC on the go in London.

Finally, take a look at Doctor Edward Zabrek's "Ten Essentials for a Healthier H/PC," Andrew Seybold's look at wireless Packet data solutions for PC Companion users, and Tom Gibson's look at the year's top ten PC Companion Web sites.

And, of course, don't forget to take a look at over 60 new PC Companion products and services.

Like I said, it's been a busy year for Microsoft — perhaps too busy. As much as I like to see improvements in the operating system and built-in applications, I wonder if the manufacturers are having as hard a time keeping up with Microsoft as I am. LG's Phenom Ultra has only been out a short while, and now they've released the Phenom Express to compete with it. And Sharp's Mobilon HC 4600, that I finally got to review in this issue, now has the Sharp Mobilon Pro and Mobilon TriPad to contend with. Hopefully, the next release of Windows CE and the built-in applications will come late in 1999 at the earliest.

I'd like to thank everybody that has taken the time to give us feedback, positive or otherwise. If you have any ideas on how we can improve *Handheld PC Magazine*, please don't hesitate e-mailing me at editor@thaddeus.com.

NEWS Bytes

Uniden UniPro PC100 ships in September

Uniden has announced that its Palm-size PC will ship in late September, and will be priced at \$379. The UniPro will come with an internal 28.8 modem, a high resolution screen (240x320, .24mm). It will ship with 4 MB of RAM memory, but will be upgradeable to 8 MB by the user. The UniPro will also ship with a docking station. The UniPro will be available through Ingram Micro and other major retail and mail order outlets. For more information, go to www.uniden.com/docs/product/prdetail.cfm?prodid=88.

Cassiopeia E-11 Palm-size PC

Casio has just released a new version of their popular Palm-size PC. The Cassiopeia E-11 will come with 8 MB of RAM built in, a Type II compatible CompactFlash slot, and an AC adapter. The E-11 will come with the following additional bonus software: Randsoft Harmony 98 synchronization software; the PalmGolf game; an Image Viewer for photos taken on Casio digital cameras; and Casio Menu. For more information, contact Casio at www.casio-usa.com/.

Lotus Organizer 5.0 to synchronize with Windows CE

Lotus Development announced the latest versions of its popular desktop PIM Organizer 5.0 will synchronize with Windows CE devices and other popular PDAs. Synchronization software for Windows CE devices will be priced at \$24.95, but a free trial version of the software is available on the Organizer Web site at www.lotus.com/home.nsf/welcome/organizer.

Legend to make Palm-size PC

Chinese computer manufacturer Legend Holdings Ltd will develop and market a Palm-sized PC using a Chinese language version of Windows CE that will use an input method that will recognize Chinese characters. The device is slated to be released towards the end of this year or the first part of 1999, and will sell for 3,500 yuan (\$420).

Enhancement Pack for Embedded System Toolkit

The Windows CE 2.1 Enhancement Pack for the Windows CE Embedded Toolkit should be available by the time you read this announcement. The Enhancement Pack is used by developers to create advanced embedded solutions based on the Windows CE 2.0 and 2.1 operating systems. The package includes sample device driver code, C/C++ cross-compilers, and assemblers to write device drivers for target platforms. Also included is sample application code, downloading and remote debugging tools.

Current users of the Windows CE Embedded Toolkit can get the Enhancement Pack for \$14.95. New versions of the Windows CE Embedded Toolkit for Visual C++ 5.0, retailing for \$499, will have the Enhancement Pack included. A list of distributors and resellers of these products is available at www.microsoft.com/windowsce/embedded/referrals/etk.asp.

Clarion Auto PC in final beta testing – should ship in October/November

After delays to fine-tune the device, Clarion will be the first manufacturer to ship an Auto PC. The device will be available from authorized Clarion dealers for \$1,299. Please see page 45 of this issue's At A Glance section for a complete product description and contact information.

Microsoft and Thomson Multimedia to develop "Enhanced TVs"

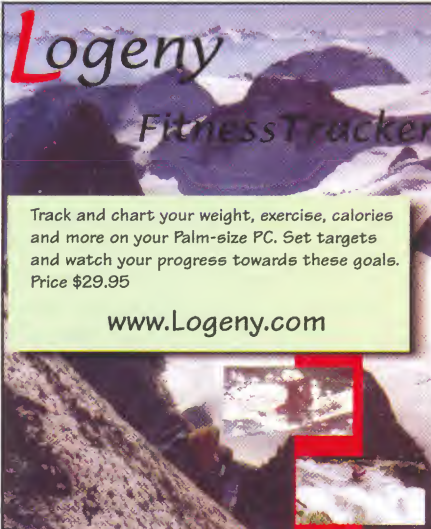

Microsoft Corp. and Thomson Multimedia have agreed to join forces in developing and promoting interactive and enhanced television products and services, and to accelerate the adoption of digital television worldwide. "Enhanced televisions" (eTVs) will feature an electronic program guide, support for interactive television programs and an integrated TV receiver, in both analog and digital versions. The integrated receivers will give consumers the kind of interactivity that today is available only through set-top boxes. Microsoft will provide HTML-rendering technologies based on the Microsoft Windows CE operating system for use in the eTVs. Thomson will license and sell WebTV set-top boxes under its RCA brand in the United States and the Thomson brand in Europe.

The two companies plan to collaborate on products and services related to the future of television with a common U.S.-based team. One focus of this effort will be the development of products and services for digital television that combine WebTV technologies with Thomson technologies for satellite and cable operators.

Pocket Maximizer 5.0 for Palm-size PC in development

Multiactive Software Inc. (formerly Maximizer Technologies, Inc.) is in the process of developing a version of its popular information manager, Pocket Maximizer 5.0, for the Palm-size PC. Maximizer is an Explorer-style organizer that shows connections between companies, people, and the tasks, appointments, and notes associated with them. In addition to name, address, phone, personal, and Internet information about contacts, Pocket Maximizer users have access to user-defined fields. Pocket Maximizer 5.0 shares many features with Maximizer, the Windows 95/98/NT desktop contact manager.

Multiactive Software is looking for beta testers for the Palm-size PC version of Pocket Maximizer. If you own a Palm-size PC and are interested, please email your name, address, phone and fax numbers to betas@multiactive.com. For further information, contact Multiactive Software; Phone: 800-804-6299; Fax: 604-601-8188; E-mail: sales@maximizer.com; Web: www.maximizer.com.

Handheld

New Software! New Hardware!

Microsoft unveils Windows CE 2.1 and Handheld PC Professional Edition

*By Rich Hall and
Chris De Herrera*

On October 12 Microsoft announced the release of Windows CE 2.1 for the Handheld PC Professional. Simultaneously, at least one manufacturer, Sharp Electronics, announced the release of the TriPad, a new "Handheld PC Professional Edition" using the Windows CE 2.1 operating system and an enhanced set of built-in applications. Hewlett-Packard and Vadem are expected to ship Handheld PC Pros in limited quantity before the end of the year. Acer, IBM, Compaq, NEC, Fujitsu, and other manufacturers are expected to release H/PC Pros in 1999.

Windows CE 2.1 is the operating system that Microsoft is releasing. Microsoft released the operating system to PC Companion manufacturers and embedded systems developers in September. Handheld PC Pro (H/PC Pro) is the term that refers to

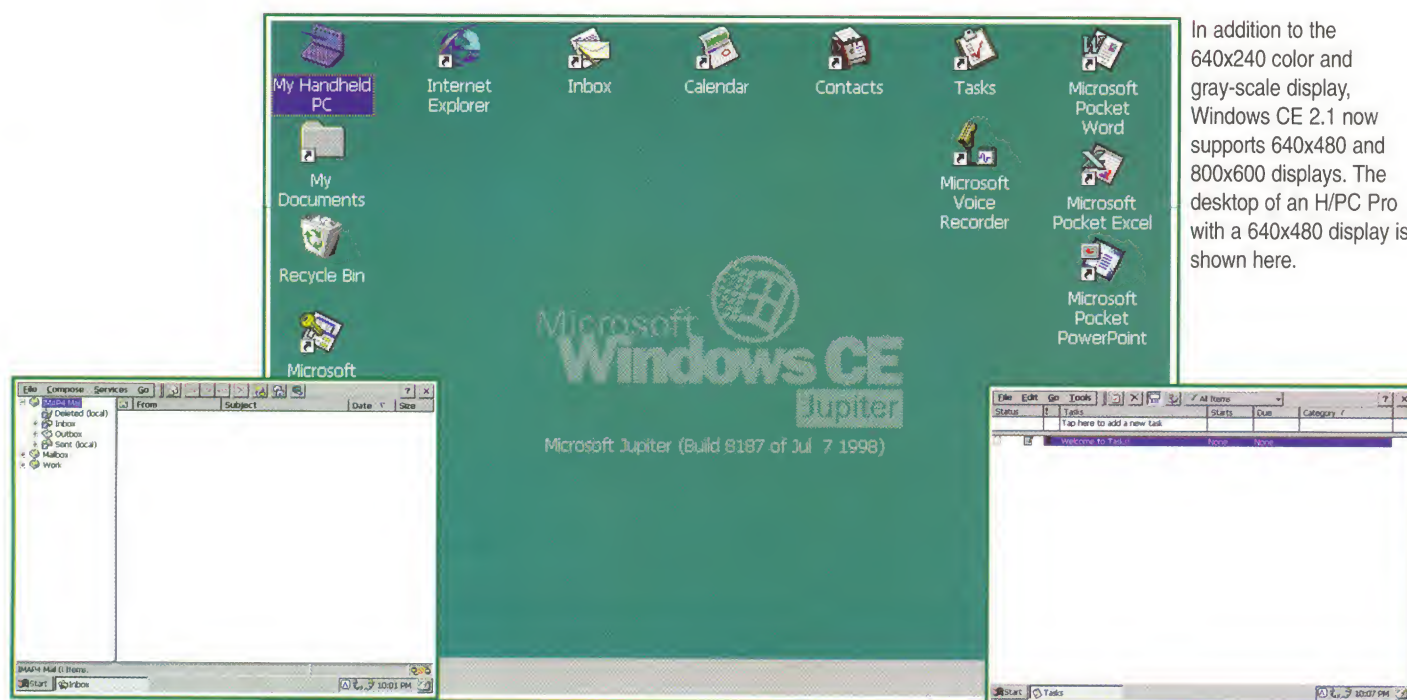

Handheld PCs running Windows CE 2.1 and the enhanced set of H/PC applications. Although the first H/PC Pros to be released are the size of a mini-notebook computer, H/PC Pros may come in smaller form factors. Various manufacturers will make decisions on what form factors will be offered.

Microsoft is sticking to its "PC companion" philosophy with the H/PC Pro. My use of the term "mini-notebook" in the above paragraph does not mean that these devices have the full range of notebook PC capabilities. Microsoft has worked to make the H/PC Pro a more talented companion, with improvements to the operating system, the built-in "Pocket" applications, and Windows CE Services. But it is not a Windows 95 or Windows NT machine.

Windows CE 2.1 operating system enhancements

Microsoft is adding support for additional CPU processors, including the ARM 720T, DEC SA-1100, NEC VR4111 (Mips R4000) (in 32-bit mode), NEC VR4300

PC Pro!

In addition to the 640x240 color and gray-scale display, Windows CE 2.1 now supports 640x480 and 800x600 displays. The desktop of an H/PC Pro with a 640x480 display is shown here.

Screen 1: Windows CE users can create "offline folders," allowing them to store and organize e-mail messages in folders.

Inbox (e-mail) enhancements

Windows CE 2.1 adds IMAP4 support, enabling mobile users to connect with Microsoft Exchange and Lotus Domino servers. In addition, Windows CE users can create "offline folders," allowing them to store and organize e-mail messages in folders (see Screen 1). Windows CE 2.1 now includes the ability to open documents saved in desktop Word and Excel formats, and save Pocket Word and Excel documents in those formats, making it easier to send and receive document attachments. Also, the folders for the Inbox can be stored on a storage card allowing users to receive larger messages and attachments.

Applications: enhancements and additions

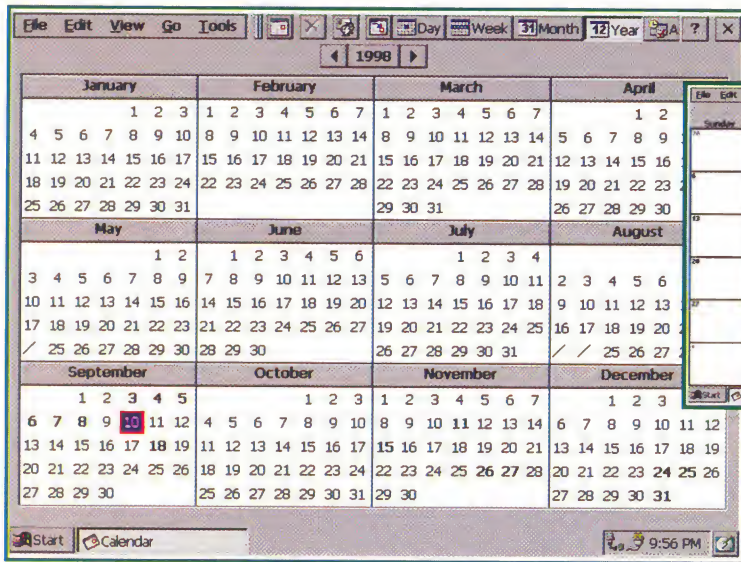

- **Tasks** — Comes with a new "quick edit"

Screen 2: The H/PC Pro's Tasks application comes with a new "quick edit" view, making it easier to access and enter Tasks.

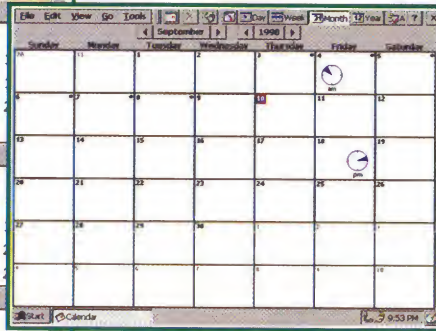

view, making it easier to access and enter Tasks (see Screen 2).

- **Calendar** — Now has month and year views, making it easier to set future appointments and navigate. In addition, you can now access the quick-edit view of your Task list from the Calendar's day view (see Screens 3 & 4).
- **Contacts** — Now comes with "Dynamically generated tabs" that adjust based on the number of contacts you have for a specific letter. This makes it easier to go to a specific contact.
- **Pocket Word and Excel** — As mentioned, file read/write capabilities for Office

(Mips R4000), and Hitachi SH4. Windows CE 2.1 also lets you store databases, registry files, fonts, and device drivers in RAM, PC flash memory cards, or anywhere in the file system. The database is accessed and updated in place (where the customer located it). The registry is accessed and updated in RAM. Windows CE 2.1 will be localized in World-Wide English (WWE), Japanese, German, French, Italian, Spanish, Brazilian Portuguese. A technical description of the changes in Windows CE 2.1 is available on Microsoft's Windows CE Web site, at www.microsoft.com/windowsce/embedded/techpapers/wce21/default.asp.

Screens 3 & 4: Calendar now has month and year views, making it easier to set future appointments and navigate.

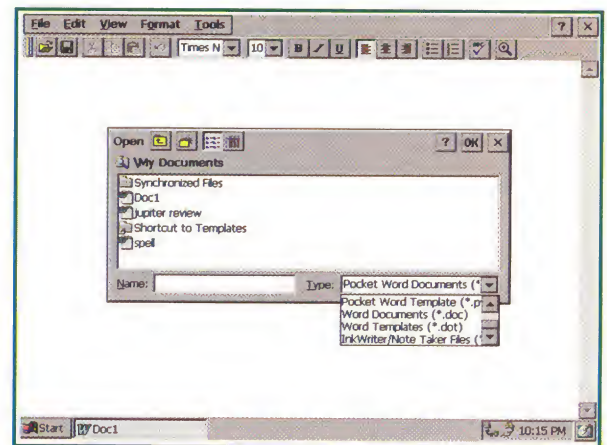

Upgrading to Windows CE 2.1

The LG Phenom Express will be upgradeable to Windows CE 2.1 and the associated Handheld PC Pro applications. We understand that Hewlett-Packard will make an upgrade chip available to its 620LX and 660LX users, but have not been able to confirm this with HP. We will publish additional information as it becomes available.

97 file formats have been added to Pocket Word and Excel. You can now open documents formatted in desktop PC versions of Word and Excel. Likewise, you can save documents you create in these formats, making it easier to send them as attachments to a colleague (see Screen 5).

- **Pocket PowerPoint** — Supports editable slide notes, but no further changes.
- **Pocket Access** — A new, and much-needed built-in database application for the H/PC (see Screen 6). This Pocket version of Microsoft's desktop database program will let users create and maintain simple, custom databases on the H/PC. Users will be able to synchronize these databases with the desktop version of Access. In addition, Windows CE 2.1 supports Microsoft's Active Data Objects (ADO), allowing developers and organizations to create H/PC Pro applications that can be synchronized with enterprise-wide databases.
- **InkWriter** — Palm-size PC users liked the ability to create handwritten notes, draw maps, and make sketches, so Microsoft ported it over to the H/PC Pro.
- **Pocket Internet Explorer** — Adds HTML 3.2 and Jscript (not Java) support. Windows CE users will be able to view more Web sites from their H/PC Pro.
- **Network** — You can now connect to your Microsoft network via Ethernet. The drivers and the client are built in.
- **Printing** — You can now print from Pocket Word, Excel and Access. Printing supports PCL laser printers as well as PCL Inkjet printers. You can also print in color or black and white to the serial port, IrDA or network.
- **Toolbars** — Each application has a toolbar that the user can move below the menus so they can access all the buttons.
- **Voice Recorder** — The voice recorder from the Handheld PC and Palm-size PC has been ported to the H/PC Pro as well.

Screen 5: File read/write capabilities for Office 97 file formats have been added to Pocket Word and Excel. You can now open documents formatted in desktop PC versions of Word and Excel. Likewise, you can save documents you create in these formats.

Screen 6: The new Pocket Access application adds a much-needed built-in database application for the H/PC.

Windows CE Services 2.2 enhancements.

This is the next release of the program that is installed on your desktop PC and lets you communicate with your Windows CE device. Microsoft just happened to release it at the same time they released the Windows CE 2.1 operating system. Features include synchronizing Access databases as

"PalmPilot, beware."

- The Baltimore Sun

There really is no comparison. With the Freestyle PC Companion, we at Everex have officially raised the bar for Palm-size computing to a new level of power and flexibility. Powered by Microsoft Windows® CE, and featuring instant desktop synchronization, a unique vibrating alarm, optional 33.6 Fax / Modem, and nearly limitless storage capabilities, the Freestyle provides the tools to manage your information and stay current. Take a voice note, jot down an appointment in your own handwriting, and check your email on the run - with the Freestyle, it's easy to be connected, and stay connected.

	Everex Freestyle™	Palm III™
Operating System	Windows CE 2.0 - familiar Windows interface which is instantly recognizable to Windows 95 / 98 users and provides seamless desktop integration	Palm OS
Screen Resolution	240 x 320 pixels per inch	160 x 160 pixels per inch
RAM	4 / 8 MB (Upgradable)	2 MB
Backlight	Yes	Yes
One-handed Navigation	Yes	No
CompactFlash Slot	Yes - support for Memory cards (up to 48 MB) Wireless communication Bar Coding, etc	No
Voice Recorder	Yes	No
Infrared Port	Yes - industry standard IRdA Port allows Freestyle to "beam" info to any device (notebook computer, network printer, for PDA) equipped with standard IRdA	Yes - but proprietary IRdA allows you to communicate only with another Palm III
Vibrating Alarm	Yes - allows for silent notification of appointments	No
Digital Ink Recognition	Yes - allows you to store notes and drawings in your own handwriting.	No
MobileCradle	Yes - a foldable cradle that provides an additional battery compartment for the Freestyle while traveling.	No
Integrated 33.6 Fax / Modem	Yes - housed in the MobileCradle on the Freestyle Executive	No

Feature for feature, the Everex Freestyle is the most powerful Palm-size PC available, putting the power and flexibility

of Microsoft Windows CE in the palm of your hand. And now, when you purchase an

Everex Freestyle Manager or Executive model between **October 15th and November 30th,**

1998, you are eligible for a \$50.00 rebate from Everex. Simply send us your old PalmPilot™ along with the form below, and Everex will send you \$50.00.

It's that simple.

But act quickly - this is a limited time offer.

I W I W I W . freestyle.everex.com

Please complete and attach sales receipt along with any model PalmPilot and return to Everex by November 30, 1998.

well as a silent mode for synchronization when it starts. In addition, it enables remote deployment options, making it possible for an enterprise to remotely install it on a number of desktops.

More choices for developers and users

In addition to the 640x240 color and gray-scale display, Windows CE 2.1 now

supports 640x480 and 800x600 displays. In addition to touch screens, it now supports trackpoint and glidepad input devices. And in addition to PC Card and CompactFlash cards (including CompactFlash I/O), it now supports Universal Serial Bus (USB) and Fast IR devices.

All this should encourage the development of a wide variety of mobile consumer devices. But enterprise computing is where

the big demand for mobile computing devices is. I expect that Microsoft listened carefully to feedback from users of Windows CE 2.0 devices, especially enterprise users. The new set of features; especially support of larger displays, enhanced communications capabilities, and Pocket Access; make Windows CE a more attractive solution for enterprises trying to limit the cost and complexity of mobile computing. ■

Sharp Mobilon Handheld PC Pros

Sharp has just announced the release of two new H/PC Pros: The Mobilon TriPad and the Mobilon Pro. Both H/PC Pros come with the Windows CE 2.1 operating system and built-in Handheld PC Pro applications mentioned in the preceding article. We were unable to get test units for this issue, so simple descriptions (based on information furnished by Sharp) will have to do.

Mobilon TriPad PV-6000

Sharp Mobilon TriPad PV-6000 series

The TriPad comes with a full 9.4", 640x480 backlit, color touch screen, and the largest keyboard of any H/PC (87% the size of a full notebook computer, according to company literature). It comes with a MIPS processor and 16 MB EDO RAM standard (upgradable to 32 MB). The TriPad's I/O options include a Type II PC card Slot, a 115 Kbps serial port, a 4 Mbps IrDA infrared port, and a built-in, low-power 33.6 Kbps modem with RJ-11 port. The TriPad is powered by a Lithium Ion rechargeable battery pack that gives up to 16 of use between chargings (again, according to company specifications). The TriPad measures 11.3 x 8.9 x 1.0 inches (28.7 x 22.6 x 2.5 cm) and weighs 3.2 lbs. (1.45 kg) with battery. The TriPad will come with a "mini-docking station" for recharging, connecting to and synchronizing with a desktop PC.

Three modes of operation

One of the things that sets it apart from existing H/PC is its "tri-mode hinge" design, which lets you use the TriPad in different ways. You can type away on it, like a small but traditional notebook computer. But you can also fold the screen back over the keyboard and use it as a pen-only tablet for taking notes and accessing schedule, contact information, and more. Finally, you twist it around another way and use it as a "presentation easel" to display Pocket Powerpoint presentations.

Mobilon Pro PV 5000

Sharp Mobilon Pro PV 5000 series

This H/PC Pro comes in a more traditional clamshell design, but still sports a large 640x480 color backlit touch screen (slightly smaller than the TriPad at 8.2" diagonal). The Mobilon Pro measures 9.3 x 7.9 x 1.4 inches (23.6 x 20.1 x 3.6 cm) and weighs 2.6 lbs. (1.2 kg) with a battery that powers the unit up to 12 hours between charges. Sharp's Digital Camera Card will work with the Mobilon Pro, but not with the TriPad. Other than these differences, the specifications are similar to those of the TriPad.

Common features

As I mentioned above, both units come with Windows CE 2.1 and H/PC Pro applications built in. In addition, both come with the bundled software mentioned in the Sharp Mobilon HC 4600 review, on page xx of this issue.

I took a look at a prototype of the TriPad at last year's PC EXPO show, and liked the three different positions of the unit. The arrangement looks flimsy at first glance, but the prototype seemed sturdy enough. Expect a more thorough review as soon as I get my hands on one.

Both the TriPad and Mobilon Pro will have a suggested retail price of \$999. They will be available to consumers in mid to late October. For more information, contact your local Sharp dealer, phone Sharp at 800-237-4277, or visit Sharp's Web site at www.sharp-usa.com.

Contact

...a Wireless H/PC!

The Contact from Novatel Wireless comes with everything you need to send and receive e-mail and browse the Web wirelessly.

By Chris De Herrera, PDCChrisD@Aol.com

All Handheld PCs come with built-in, or add-on modem capability. This is supposed to make it easy to keep up with e-mail and other online activity. But you still have to stop, find a telephone, pull out a cable, connect the H/PC to the phone, log on to your ISP or network, and download your e-mail - not really "information on the go." Mobile users want to be able to reach in their pocket, check their e-mail, tap out a quick response, send it and forget about it. And they want to do this wherever they are, without stopping to find a phone.

Wireless communication is the obvious solution, but until recently it has involved a confusing combination of wireless transmitter/receivers, software, and wireless services. This review looks at the Contact H/PC from Novatel Wireless, the first H/PC with a complete wireless solution built-in and ready to go. The Contact (priced at \$995.95) is a modified LG Phenom. Added to this standard Windows CE 2.0 H/PC are all the hardware and software needed to connect wirelessly to a CDPD (cellar digital packet data) network. CDPD service is available for most of the United States and

Contact ships with the Wireless Subscription Wizard to make finding and subscribing to such a service easy. This review focuses on using the wireless CDPD modem and services, but a brief description of the basic Windows CE hardware and software features follows.

The Novatel Wireless Contact H/PC

As mentioned, Contact's hardware is based on the LG Electronics Phenom H/PC (the regular Phenom, not the Phenom Ultra or Phenom Express mentioned in this issue). Contact is 1/2 inch wider than the Phenom to accommodate the built-in modem, and at 22 ounces weighs 5 ounces more than the Phenom. Contact comes with 16 MB or ROM and 8 MB or RAM (expandable to 32 MB). It has a 640 x 240 pixel backlit touch screen. The screen is monochrome as opposed to

color, to conserve battery power. Contact is powered by a 780 mAh Lithium Ion Battery and comes with an AC Adapter for powering the unit and charging the battery.

The built-in Wireless IP Modem is CDPD Version 1.1 compliant with a 19.2 Kbps data rate and 0.6 watts transmit power. Contact also comes with a built-in wireline Fax/Modem (and RJ-11 modem jack). It operates at 14.4 Kbps for data, and a 9.6 Kbps for fax. The Contact has one Type II PC Card slot, a combination serial/VGA port (VGA cable is available as an option), an IrDA infrared port, built-in speaker and microphone.

Contact is a Windows CE 2.0 H/PC with all the standard built-in applications, including Calendar, Contacts, Tasks, Pocket Word, Pocket Excel, Pocket PowerPoint, Voice Recorder, and various utilities. In addition

ABOUT THE AUTHOR

Chris De Herrera is a Forum Consultant for America Online's Windows CE Forum. He is also a Microsoft Most Valuable Professional for Windows CE. The AOL Windows CE forum is accessible via the keyword "Windows CE."

Contact: A Wireless H/PC

to these Windows CE standard applications, Contact comes with Wireless Modem Manager, Wireless Subscription Wizard, and Wireless Modem Status. The package also includes two general communications utilities: bFax and bView (from bSquare Technologies, Web: www.bsquare.com).

Getting started with CDPD

Contact comes with the necessary CDPD software already loaded. All you need to do is contact a CDPD provider, set up and activate an account, and you're ready to go. The built-in Wireless Subscription Wizard helps you do this. CDPD service is generally available in areas where analog cellular service (AMPS) is available. ATT Wireless and Bell Atlantic offer CDPD service in the United States. For coverage maps and additional information, visit the CDPD Web site at www.cdps.org. (Note that most major cities in the United States have CDPD service, but Los Angeles and Atlanta do not.) Besides selecting the carrier you should also select a mail/Internet service. Go America offers a bundle providing access service and unlimited e-mail for \$59.95/month. For more information, call 888-462-4600 ext 1 or visit their Web site at: www.goamerica.net. Once you contact the vendor of your choice, it can take from 4 to 72 hours to enable your service. During that time you can configure the Contact to connect using the built-in Wireless Subscription Wizard. This utility configures your connection for you.

Wireless modem for other H/PCs

Novatel Wireless also offers a wireless modem solution for other H/PCs.

Sage is a compact CDPD wireless modem that includes rechargeable battery pack, AC adapter and software for Windows NT/95/98 and Windows CE (SH3 version only, MIPs version in development). Sage attaches to the serial port of the H/PC via cable and acts like a standard AT modem. For more information, contact Novatel Wireless (Phone: 888-888-9231 Web: www.novatelwireless.com/).

Sage CDPD wireless modem: \$419

Once your CDPD service is enabled, you can connect to the wireless network automatically by simply checking your e-mail. This is done by connecting to your service provider's e-mail service that is listed in the Inbox. If you want to browse the net without checking your e-mail, you must first bring up the wireless status screen, provide the password and log on. Then you can go to Pocket Internet Explorer and check out your favorite Web sites. But remember that the built-in wireless CDPD modem is only rated at 19.2 Kbps (and you'll probably experience speeds more on the order of 14.4 Kbps). The wireless connection is not terribly fast and downloading graphics can slow down your browsing. I recommend that you turn off graphics to speed up communication.

Just like any other modem

Once you connect to the CDPD wireless network, Contact works like an H/PC connected via any landline modem. Use Inbox to send and receive e-mail. Use Pocket Internet Explorer to browse the net. And use the bFax utility that comes with Contact to send and receive faxes. Contact, with a fully-charged Lithium Ion battery, will run for about 10 hours without using the modem. It will run for about two hours with continuous CDPD modem use. To conserve battery power, leave the CDPD modem turned off most of the time when not being used. Go easy on using the backlighting; it increases battery consumption 10-15 times normal. Finally, plug-in the AC adapter/charger whenever you get a chance.

Contact is a good solution for Mobile users that need to access e-mail and the Internet wherever they are, without stopping to look for a phone. The hardware and software are all in one package and it's simple to sign up for a CDPD service. You can be online and in touch in your car, at a client's office, and at the grocery store. You pay more in monthly service charges, but your e-mail is always in your pocket, waiting for you, wherever you are. ■

Mini-Notebook Trend

NOVEMBER/DECEMBER 1998 HANDHELD PC MAGAZINE 17

LG Phenom Ultra: Here's What You Get!

The LG Electronics Phenom Ultra has an 8 inch (21 cm) diagonal color touch-screen display, a 100 MHz Hitachi SH3 CPU, 16 MB of internal RAM (expandable to 32 MB), 12 MB of upgradeable ROM, and a touch-typeable 74-key keyboard. The unit comes with a built-in 33.6 kbps software modem; VGA-out port and IrDA interface; Type II PCMCIA slot; Compact Flash card slot; rechargeable Lithium-Ion battery pack (rated at 10 hours according to LG specifications); 10 quick launch keys (two are user programmable); a built-in microphone, speaker and voice recorder. The Phenom Ultra weighs 1.87 lbs (0.85 kg) with battery pack. The package includes an AC adapter; serial cable; and VGA adapter for the end of the serial cable, a modem cable, a Windows CE manual, a Phenom Ultra hardware manual, and a Pocket BizCalc manual. A CD ROM with Windows CE Services is included, along with a CD-ROM containing additional freeware, shareware, and announcements for other third party products.

The Phenom Ultra is a Windows CE 2.0 Handheld PC with all the associated features, utilities and "Pocket" applications built in. These include the Windows CE 2.0 operating system, Pocket Word, Pocket Excel, Pocket PowerPoint, Pocket Internet Explorer, and Pocket Outlook (a Handheld PC version of MS Outlook that includes Calendar, Contacts, Tasks, and Inbox).

Bonus Software Built-in

The LG Electronics Phenom Ultra has

the following additional software built into its ROM. You don't have to install the software and it takes up no extra disk space, except for data files the applications create.

bFAX Professional and bVIEW — Adds fax send/receive capability to your Phenom Ultra. bVIEW lets you view faxes (and other documents) before sending them. bFAX Pro is available commercially, bVIEW is not (contact: Bsquare Technologies; Web: www.bsquare.com).

Pocket BizCalc — Adds a full-featured business/financial calculator that emulates the HP-12C calculator. Pocket BizCalc is available commercially and comes in H/PC and Palm-size PC versions (contact: Odyssey Computing Inc., Web: www.odysseyinc.com).

Pocket Finance — Lets you track deposits and withdrawals on your Phenom Ultra and will exchange account entries with Intuit's Quicken and Microsoft's Money desktop applications. The program is available commercially for H/PCs (contact LandWare, Inc; Web: www.landware.com).

Bonus Software on CD ROM

The following programs are on the CD ROM that comes with the Phenom Ultra and have to be installed on the H/PC.

Citrix ICA Client — Lets you use the Phenom Ultra as a thin client to a Citrix Winframe Network. Users can connect the Phenom Ultra to a Winframe network to access and run full-blown network applications on the Phenom. The ICA client for Windows CE is not available directly from

Citrix, but is distributed by the respective H/PC manufacturers, including LG Electronics, Sharp Electronics, Philips, and Hewlett-Packard.

Harmony 97 — Trial Version of a data synchronization program that embedded one-click synchronization between the Phenom Ultra and many desktop contact managers and PIMs by adding a menu bar inside the PIMs. Harmony '98 is now available commercially (contact: Rand Software, Web: www.randsoft.com).

Pocket Finance Administrator — Adds the Pocket Finance Administrator to your desktop PC. This lets you exchange Quicken Interchange Format (QIF) files with desktop applications such as Quicken, and Microsoft Money. See Pocket Finance contact information above.

MobileCHOICE — A mobile, wireless, and dial-up application suite. Combined with IKON's Mobility Services, and a Motorola Personal Messenger wireless modem, you can send and receive Internet e-mail wirelessly. The program and services are available commercially (contact: IKON Office Solutions, Web: www.integra.net).

Pocket On-Schedule — Trial Version of a contact manager that features unlimited contact databases, automated dialing support, Internet access from Pocket On-Schedule, direct e-mail, contact information templates, and customizable layouts. Pocket On-Schedule is available commercially (contact: Odyssey Computing Inc., Web: www.odysseyinc.com).

stretch the meaning of the word "handheld." You can still hold it in one hand, but you're better off carrying it in a briefcase or tote bag.

Handhelds seem to be growing into mini-notebook computers. They are lighter, generally less expensive, and have better battery life than Windows 95/NT notebooks. In addition, they come with the basic software and most-used applications built-in, making the total cost of ownership (operating system, additional software and upkeep by an MIS department) much less than traditional notebook PCs. I think this size H/PC has the best chance of wide corporate adoption.

Whether or not individual mobile professionals buy the newer H/PCs in great quantity depends on how powerful this H/PC is per-

ceived to be, and how "visible" it is. Manufacturers need to promote it as an inexpensive and practical solution, and they have to push it out into the retail channel more vigorously. I don't think many users will buy a product like this sight unseen. They'll want to go to a store and look at the screen, type on the keyboard, and play with the built-in applications.

The Phenom Ultra will retail for \$799, and LG has done a pretty good job of making the Phenom Ultra available. In the U.S. it's stocked at CompUSA, Computer City, Fry's and several other retailers (on the Web go to www.lgphenom.com/buy/index.htm for a list of retailers carrying the Phenom Ultra). The Phenom Ultra is also available on line at the Velo Store (Web: [\[press.com/lgstore/default.asp\]\(http://press.com/lgstore/default.asp\)\). NEC also makes their MobilePro available at CompUSA and other computer resellers. I've only seen the Hitachi H/PC available through Mobile Planet's Web site: \[www.mobileplanet.com\]\(http://www.mobileplanet.com\).](http://www.bcex</p>
</div>
<div data-bbox=)

It's not as powerful as pricier notebook PCs, and I wouldn't use it as my primary computer. But my mobile needs are relatively straightforward, and the Windows CE applications fit the bill. I might use a Palm-size PC in addition to an H/PC this size, to make sure Contact information and Calendar appointments were always with me. But I'd use the Phenom Ultra, or something like it, on the road, for e-mail, word processing, and even a little Web browsing or game playing. ■

Phenom Express

LG's new Handheld PC Pro

By Rich Hall

I just received a pre-production version of LG's newest H/PC, the Phenom Express. It came with Windows CE 2.0 and the associated applications, but LG has informed me that the Express will be upgradeable to Windows CE 2.1 when it is available.

Larger, better connectivity, longer battery life

Like the Phenom Ultra, the Phenom Express has a 100 MHz Hitachi SH3 CPU, a large touch-typeable keyboard, and a 256 color touch-screen (the 1/2 VGA screen is slightly smaller than the Phenom Ultra's). The Express is about one inch wider than the Ultra, making room for a larger triple-cell Lithium Ion rechargeable battery that powers the Express up to 12 hours between rechargings. The Express comes with 32 MB of RAM memory and has a fast 56 Kbps built-in modem. It comes with separate infrared, serial, parallel, and VGA-out ports. The Express has a single Type II PC Card slot, but does not have a CompactFlash slot. However, you can insert a Compact Flash card in an adapter, and then use it in the PC Card slot.

A newer operating system and better set of software

The Phenom Express will ship with Windows CE 2.1 and Handheld PC Pro applications as soon as they are released to manufacturers by Microsoft. The new version of Windows CE will include improved communications capabilities and a new built-in application, Pocket Access (see

page 10 for more on Windows CE 2.1).

The Phenom Express will also include built-in versions of bFax Professional, bView and Pocket Finance. In addition, the Express comes with a built-in utility that lets you backup your databases to any location on the Express, including a PC memory card. You can also use the utility to restore corrupted or erased databases from the backups.

The Phenom Express comes with a limited version of Mail on the Run, which lets you download address books from supported mailing services. It also comes with an e-mail file attachment viewer, an Internet e-mail setup Wizard, and the Citrix ICA Thin Client described in the Phenom Ultra review.

First impressions

I only got to look at a pre-production Phenom Express for a few days. Unfortunately, it did not come with the new version of Windows CE. Still, I finally got to take a look at the hardware of one of the new Handheld PC Pros. I liked the keyboard and color screen, but there's nothing new there.

The Phenom Express comes with a rather large cylindrical battery compartment that makes the whole unit a little wider than the Phenom Ultra. This compartment rotates down, creating a ledge on the back of the unit and causing the keyboard to rest at a slight angle when the Express is sitting on a table. This makes it easier to type. Rotating the battery compartment down also exposing the parallel port and VGA-out ports in the back of the express. The VGA-out port is standard and does not require a special

adapter cable as the port on the Phenom Ultra does. This is the first parallel port I've seen on an H/PC, although we'll probably be seeing them more often with the new Handheld PC Pro class of computers. A parallel port is a very nice addition, making it much easier for mobile users to find a spare printer when they're on the road.

LG chose to stick with the a smaller display for the Phenom Express, instead of going with the standard 640 x 480 display supported by the newest version of Windows CE. According to LG, it was to keep the unit smaller. But they're also promoting this as an ultimate on-line device. With the added width of the battery compartment, it seems that they could have slipped in a larger screen without adding to the size of the unit.

We'll review the production version of the Phenom Express, with Windows CE 2.1, when we get one. The Phenom Express should be available in the first week of October, through the same retail stores selling the Phenom Ultra. The estimated retail price is \$899. LG will offer a Windows CE 2.1 upgrade chip to owners of the Phenom Ultra Windows CE 2.0 version, but they are still finalizing plans for that. LG will sell off their inventory of the Phenom Ultra and focus their efforts on the Phenom Express. However, they will continue to provide full support to Phenom Ultra owners, and will make a CE 2.1 upgrade chip available for the Ultra as well. ■

Sharp Mobilon HC-4600 H/PC

By Rich Hall

The Mobilon HC-4600 is Sharp's update of the popular HC-4500 reviewed thoroughly beginning on page 6 of the May/June 1998 issue of *Handheld PC Magazine*. Check out that review for more details. I'm going to keep this review brief, focusing on the improvements Sharp made in the unit. A brief description of the specifications can be found in the At A Glance section, on page 41.

The Sharp Mobilon HC-4600 ships with 16 MB of EDO RAM (expandable to 32 MB), and slightly more powerful batteries. Otherwise it's identical to the Mobilon HC-4500. The Mobilon HC-4600 comes with some of the same applications I liked in the first review, including:

- **Image Editor** – built into the HC-4600's ROM, this application lets you edit photos you take with the option Digital Camera Card (or any .JPG image).

- **IntelliMigrate** – installed on a desktop PC from the CD ROM, this application lets you "migrate" data from a number of different PDA formats to your Mobilon (or any H/PC). The program was developed by Puma Technologies (www.pumatech.com).

Additional software improves functionality

The big change with the HC-4600 is the additional software Sharp chose to build in and bundle with the Mobilon. These programs include:

- **bFax Pro** – installs to the HC-4600 from CD ROM and adds fax send/receive capability. Includes a utility that "spools" faxes and sends them out all at once when you connect your Mobilon to a telephone. (Developed by bSquare Technologies:

www.bsquare.com).

- **PC File Viewer** – built into the Mobilon, this application lets you view common PC-formatted documents on your Mobilon (see Screen 1). View MS Word, WordPerfect, MS Excel, Lotus 1-2-3, common graphics formats, and more. (Developed for Sharp by INSO.)

- **Citrix ICA Client** – lets Mobilon users access and run desktop Windows applications remotely from their H/PC. (Developed by Citrix.)

- **PhotoLink** – lets you link a .JPG, BMP, or .GIF image or photograph to a Contacts entry (see Screen 2). You can link images taken by the Sharp Digital Camera Card, or images you download from other

sources. (Developed by Randsoft: www.randsoft.com.)

- **MPEG Player** – lets you play MPEG 1 format movie files (see Screen 3). The image size is fixed at 160x120 dots. You can use this application to play MPEG movies you create with the Sharp Digital Camera.

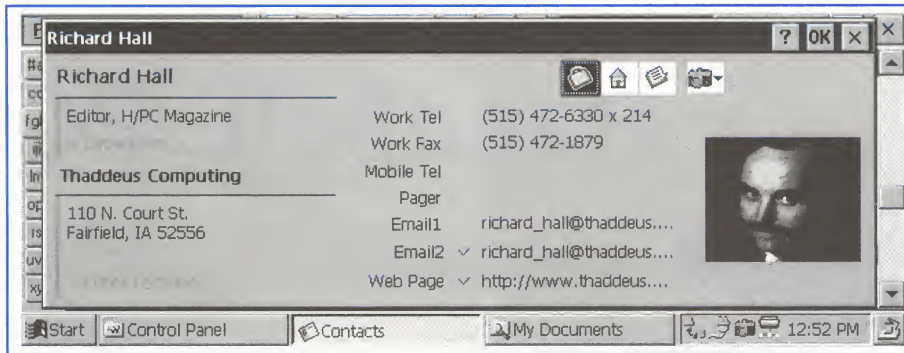

- **IR Communication utility** – lets you exchange data via infrared communications with Sharp ZR Series PDAs.

Digital Camera Card

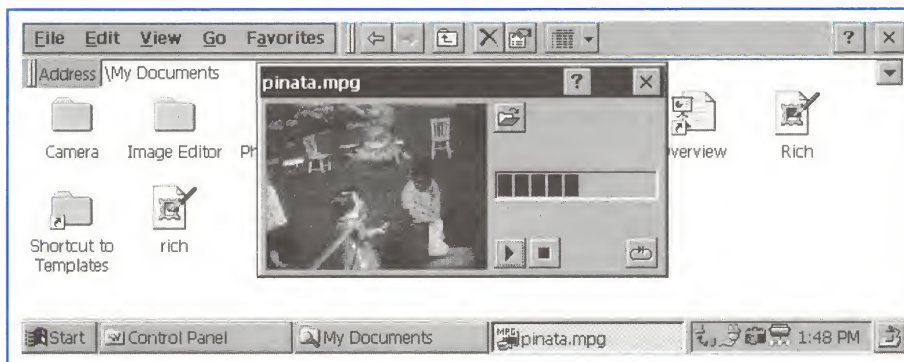

This doesn't come with the HC-4600, but slips into the Mobilon's PC Card slot and turns the HC-4600 into a digital camera that can take pictures up to 640x480 VGA display size with up to 16.7 million colors. You can adjust the size and quality of the image to reduce the size of the .JPG file. The Digital Camera Card has an optical zoom feature, and is capable of continuous shooting in manual or automatic mode (which helps create MPEG movies). The Digital

Screen 1: PC File Viewer lets you view common PC-formatted documents on your Mobilon, including MS Word, WordPerfect, MS Excel, Lotus 1-2-3, common graphics formats, and more.

Screen 2: PhotoLink lets you link a .JPG, BMP, or .GIF image or photograph to a Contacts entry.

Screen 3: MPEG Player lets you play MPEG 1 format movie files, including MPEG movies you create with the Sharp Digital Camera.

PC File Viewer is a very nice addition, making it easy to take a quick look at a large number of files and decide which ones to delete, move, etc. PhotoLink is another valuable addition. Screen 2 shows PhotoLink displaying my picture in Contacts. You could also use it to attach a photo of a house or a map to a Contact entry. I also had fun with the MPEG Player, which lets you play MPEG 1 format movie files in a fixed sized image of 160x120 dots (Screen 3).

As nice as the Mobilon is, Sharp isn't resting on its laurels. They've just announced the TriPad, using the Windows CE 2.1 operating system and the H/PC Pro built-in applications (see page 14). They'll also offer a smaller version of the H/PC Pro, which will accept the Digital Camera Card. ■

Sharp Mobilon HC-4600 – \$899
Sharp Digital Camera Card – \$399
Docking Station Kit – \$149

Contact your local Sharp dealer or Sharp Electronics Corporation; Phone (USA): 800-BE-SHARP; Fax on demand: 630-397-8601; Web: www.sharp-usa.com

Camera Card comes with two additional applications for the Mobilon.

- **Camera** – installed from CD-ROM or disk, lets you use the Digital Camera Card available as an accessory.
- **Album** – installed from CD ROM or disk, this application lets you organize and view .JPG images on the Mobilon.

Impressions

The HC-4600 is fine as a standalone product. It's attractive, well-made, comes with a built-in modem and a lot of nice extras. It's rated at six hours of use on fully charged batteries, which is sufficient for most mobile users. But if you are away from an AC adapter for long periods of time and use the Mobilon a lot, get a spare battery pack and keep it charged. The optional docking station kit comes with a spare NiMH rechargeable battery pack that can be charged outside of the Mobilon in the docking station.

I liked the Mobilon and Digital Camera Card combination. I didn't test it to its limits, but had no problem taking 55 or so digital photos without running out of file storage space or battery life. I got over 200 when I tested the Digital Camera Card with the HC-

4500, last year. I expect the performance to be similar. A spare battery pack is also advisable if you use the Digital Camera Card a lot.

Compaq C-Series Handheld PC

By Rich Hall

The Compaq's C-Series is one of the few H/PCs that's still small enough to fit in your pocket. That fact, a sturdy construction, and a built-in modem make it a reasonable choice for mobile professionals who want to carry one portable computer with them to access data and stay in touch.

Compact's C-Series H/PCs come in monochrome (810) and color-display (2010 c) versions. Both come with a 75 MHz RISC processor, and internal 33.6 Kbps integrated modem with RJ-11 port, a serial port, PC Card slot, infrared port, speaker, and AC adapters. The monochrome-screen 810 has 8 MB of RAM and is powered by two AA alkaline batteries up to 20 hours. The color-screen 2010 C has 20 MB of RAM and is powered by a rechargeable NiMH battery pack for up to three hours. Both come with the same Windows CE 2.0 operating system and built-in applications. Both have the same set of bundled software, described below.

Bundled software

Both versions of the C-Series come with the following additional software:

- **bFax Express** – lets you send faxes from the C-Series. (Commercial version available for \$29.95 from bSquare Technologies, Web: www.bsquare.com.)

- **Quicknotes** – adds a notepad that lets you enter handwritten notes, maps, sketches, etc. and organize them by date. (Commercially available for \$13 from Communication Intelligence Corporation, Web: www.cic.com.)

- **Spell Checker** – lets you spell check in any Windows CE application. (Developed by Communication Intelligence Corporation, Web: www.cic.com.)

- **Pocket Carbon Copy** – lets you remotely control your desktop PC from your

H/PC. (Commercial version available bundled with Carbon Copy 32 V 5.0 for \$139.95, from Compaq dealers. Web: www.compaq.com.)

- **Mail on the Run** – provides you with direct and remote access to popular LAN-based e-mail systems, including Microsoft Mail®, Microsoft Exchange Server, Lotus cc:Mail, and Lotus Notes Mail. (Commercial version available for \$89, from River Run Software Group, Web: www.riverrun.com.)

- **All in Sync** – lets you remotely synchronize Pocket Calendar, Tasks and Contacts with their Lotus Notes calendar and scheduling data. (Commercial version available for \$138, from River Run Software Group, Web: www.riverrun.com.)

- **Pocket BizCalc** – a full-featured business/financial software calculator that emulates the HP-12C. Using RPN logic, it performs loan/mortgage; discounted cash flow; bond; compound interest; leasing; actuarial and markup functions; depreciation; amortization schedule; and more. (Commercially available for \$39.95, from Odyssey Computing, Inc., Web: www.odysseyinc.com.)

- **IntelliMigrate** – lets you "migrate" data from several other types of palmtops or PDAs to your H/PC. (Commercially available for \$39.95 from Puma Technology, Web: www.pumatech.com.)

A quick look

I tested the color-screen 2010 c. Compaq's specification sheet indicates that it is a little larger and heavier than the monochrome-screen 810. The 2010 c has a substantial feel to it. The color display is easy to see, especially when backlit. The keys were small, round, and had a positive calculator-like feel when you pressed them. You're not likely to accidentally strike one, but you probably won't type very fast either.

I like the software Compaq chose to bundle with the 2010 c, especially the PC Card Backup and Restore utility. The biggest danger for mobile users is losing his or her data. A PC Card backup utility is very handy, especially if you spend any length of time away from the office. The Flash Manager application in the Control Panel lets you set the number of days between automatic backup.

I also liked the Spell Checker from CIC. It lets you check spelling in applications other than Pocket Word. Has a nifty macro feature that lets you enter seven-letter shortcuts for common phrases. For example, turn on the macro feature and type in "CIC" and the words "Communication Intelligence Corporation" are automatically typed in. This feature comes in handy on any H/PC, but particularly an H/PC with a smaller keyboard. Anything you can do to simplify text entry helps.

Finally, I appreciated the addition of CIC's Quick Notes. This application lets you jot down freehand notes, make maps and diagrams. From Tools menu select Options and check Grid Lines and a faint grid appears on the screen. I found this useful for creating maps and making sketches.

As I mentioned, the C-Series H/PC has relatively small keys, with a calculator-like feel to them. You won't want to do a lot of data entry on it. The 2010 c (color screen version) gets about three hours of use on full charged batteries. That's probably OK if you are an infrequent mobile user – the kind of person who spends most of the time at a desktop, and doesn't do a lot of work on the H/PC. But if you spend a lot of time away from your desk, or are on the road a lot, you should probably consider the monochrome version of the C-Series.

For contact information, see *At A Glance*, page 41. ■

Going Mobile

with Windows CE

By John T. Kennedy

One of the benefits of the Handheld and Palm-sized PCs is that you can take them with you wherever you go and still access vital information. But what happens when you need to read your e-mail, or refer to a Web site in a hurry? Normally it's a mad rush to the nearest telephone wall socket to connect up your modem. That is, assuming your PC Companion actually has a modem. Some have a software modem built in, but many require the addition of a PC Card fax/modem – and these are renowned for gobbling up battery power. Fortunately, there's an alternative.

Picture yourself sitting on a beach, reading your e-mail, surfing the Web, or taking part in an online chat. You've left all your cables and adapters at home, and you're not straining your PC Companion's batteries. Wishful thinking? No! It's a combination of wireless and infrared communications that is not only available now, but cheaper than you might think.

The infrared/mobile phone combo!

Every H/PC and Palm-size PC has an IrDA-compatible infrared port located somewhere on the edge of the case. The infrared (IR) port can be used to transfer data to another PC Companion. It can even be used to synchronize the PC Companion with a desktop or laptop PC (assuming the host machine has an IR port).

Recently I discovered an additional use for the IR port of my Velo1: connecting the H/PC to a mobile telephone and using the two to go online. The latest batch of high-end GSM mobile phones from companies such as Ericsson and Nokia all feature IR ports. These phones are surprisingly affordable when

Screen 1:
The new Ericsson SH888 is unique in that it comes with a GSM modem built into it.

bought as part of a service contract, at least in the UK where the cost is between £100 and £150 (about US \$160 to \$240).

The Ericsson SH888 mobile phone is exceptional in that it has a built-in modem (see Screen 1). This greatly simplifies the task of connecting a computer to the phone. No special PC Card modems, wires or cables are required. All you need to do is set the computer and phone side by side. You then activate the IR port on the telephone, config-

ure your H/PC and start your communications. To the H/PC, the telephone appears as a standard modem.

A word of caution: not all phones featuring IR ports can be used in this way. The Ericsson SH888 is the first to have all the capabilities of a modem included as standard. Other series 600 and 700 Ericsson phones can be used with a small snap-on adapter called the DI27, which provides similar capabilities. Unfortunately, current Nokia models seem to use different IR standards, and cannot operate with Windows CE PC Companions. The exception appears to be the Nokia 9000 Communicator series: a mobile phone with handheld capabilities built in. The Communicator offers similar IR connection opportunities.

Connecting Windows CE to the world

The H/PC and Palm-size PC are designed to easily connect to a desktop or laptop PC computer to synchronize and share data. In addition, both are fully conversant in the TCP/IP networking protocol and come with a full e-mail client called "Inbox." The H/PC also has a Web browser (Pocket Internet Explorer), and the Palm-size PC has Mobile Channels for reading downloaded Web content.

You can use the Windows CE "Remote Networking" application to dial directly into an Internet Service Provider, provided your

ABOUT THE AUTHOR

John Kennedy is a technical journalist based in Northern Ireland (although he's open to offers). When he's not writing, he's programming Windows CE applications for Sticky Software. E-mail: johntkennedy@sticky.net.

PC Companion has a modem. Once connected, you can run Inbox to send and receive e-mail, or use the H/PC's Pocket Internet Explorer to browse the Internet. To configure your PC Companion for such a "dial-up connection" to your Internet Service Provider (ISP), activate the Start menu and select Programs, Communications, and Remote Networking (on a Palm-size PC select Programs, Communications, and Connections). Tap on the "Make New Connection" icon and select "Dial-Up Connection." You'll then select the modem your PC Companion is using and supply your ISP's telephone number, your own IP settings, username and password in the appropriate dialog boxes.

Normally, Windows CE only allows this sort of connection to happen via modem. However, with a simple modification to the Windows CE Registry, it's possible to add the PC Companion's IR port to Remote Networking's list of available modems. Then, when you configure a new Dial-up connection, you can select the IR port as your modem, and use a mobile phone equipped with an IR port to connect to your ISP and the Internet. Please note that I tested the proce-

One Cat Doodler™ 2

Fits a full-scale drawing package in the palm of your hand...

Top Tips for Road Warriors

Make sure your system works before you go on the road! I was five hundred miles from home when I discovered that my Windows CE SMTP setting was incorrect, and nothing I could think of would get it working. I had to register and use the Web-based Hotmail e-mail system to send and receive necessary e-mail. The problem with the SMTP was cured when I returned home and figured out that I had to place angled-brackets around the Return address: setting in the Inbox Service Properties dialog. Test things out before you hit the road.

Make sure your cell phone service provider is playing ball. After spending a day cursing both telephone and computer, I discovered that my cell phone service provider hadn't switched on the data features I needed to connect. If you try everything, but continue to get the "No Carrier" message, contact your phone people.

One thing at a time, please! Web browsing with full graphics is very slow at 9600bps. Web browsing and downloading your e-mail at the same time, is even more so.

Use H/PC's built-in terminal program for BBSs. The H/PC has a built-in terminal emulation program that is perfect for logging into bulletin board systems. It also works over an IR link to a compatible telephone. Access the Terminal option from the Start, Programs, Communications menu.

No terminal program on the Palm-size PC? Well, actually there is. When you configure a New Connection, the Terminals section of the Devices Properties screen provides check boxes that let you display a terminal window before and/or after dialing. Check the before option and select Manual Dial and you have a simple terminal window for testing your link with your modem.

Streamline your e-mail before you leave town. If you are going on holiday, make sure you unsubscribe from your usual mailing lists, or switch to Digest mode. Trying to pick through a hundred messages a day from your favorite lists can be hard work.

Understand your mail settings. Inbox can be configured to download a fixed number of lines of a message and ignore attachments: both good practice until you get the opportunity to connect at a higher speed.

Make use of the excellent Windows CE software available. Although you can include attachments with e-mail, Scotty FTP is essential for a slightly more flexible approach to file transfers (such as downloading electronic texts from Project Gutenberg, for example). It's available from Ruksun software (www.ruksun.com). There are also several client programs available for the real-time, text-based chat systems such as IRC and IRQ: making it possible to join in-group discussions while you relax on the beach. Products such as IrcCE from Mov Software (www.movsoftware.com/) and the bMobile suite from bSquare (www.bsquare.com) will ensure you are never out of touch,

What is GSM?

GSM originated in Europe and is the most popular digital wireless standard in use by mobile phones, with over one hundred million users worldwide. In Europe, GSM operates on two bands: 900MHz and 1800MHz. The Ericsson SH888 mobile telephone can switch between these automatically giving better coverage in busy areas. In the U.S., the 1900MHz band is used by GSM and so the SH888 won't operate. However, Ericsson tell us a new model called the CH888 is due to be launched soon, and this operates on U.S.-friendly AMPS and GSM1900 bands, offering the same IrDA compatible modem facilities as the SH888.

There are currently 293 network operators from 120 countries around the planet offering GSM services, including 17 North American GSM wireless operators which now provide commercial service to more than 2 million customers in 1,545 cities in 41 U.S. states, the District of Columbia and four Canadian provinces. For details on GSM networks in the U.S., follow this link: www.gsmworld.com/gsminfo/cou_us.htm

Screen 2: The Registry Editor showing your IR port list of modems.

Screen 3: After modifying the Windows CE Registry, the IrDA port appears in the "Select a modem" drop down list when you make a new dial-up connection.

duration on two PC Companions: a Philips Velo 1 H/PC that had been upgraded to run the Windows CE 2.0 operating system and a Philips Nino Palm-size PC. It should work with all Windows CE 2.0 devices.

Modifying the Windows CE Registry

[WARNING: Do not attempt to modify the Windows CE Registry unless you know what you're doing. You can corrupt your PC Companion's system, requiring a complete hard reset to get going again. You would

lose all your data. Back up your data before attempting this.]

Going online via IR communications and a mobile phone is a relatively straightforward process, but modifying the Windows CE Registry requires some care. The Ericsson SH888 mobile telephone comes with a CD-ROM containing a little utility program that automatically makes the necessary changes to your Windows CE Registry. This worked on all the Windows CE (CE v1 and v2) machines I tested it on, including the Palm-size PC.

Modifying the Registry can also be done using a Registry Editor program like RegEditCE (Shareware, Grundle Software, Web: www.grundlesoftware.com/wince.htm). I found details on how to "hack" the Registry on the Web site of Arne Hess (<http://windowsce.hess.net/irda.html>). Arne is a dedicated wireless communications enthusiast who has tested several makes of mobile telephones with Windows CE devices.

In summary, you need to add a new key to the ExtModems section under HKEY_LOCAL_MACHINE. The new key will create a new Dial-up networking option, which you can assign to the IR port, usually COM3. Screen 2 shows the modified Registry, viewed from the Registry Editor. Screen 3 shows the IrDA port appearing in the "Select a modem" drop down list that appears when you make a new dial-up connection.

Again, don't attempt hacking the Windows CE Registry if you don't know what you're doing.

A little slower, but no wires!

Once you've added the IR port to the Windows CE Registry and created your new dial-up connection, you're ready to go. Lay your H/PC and mobile phone down side by side and tap the icon for the dial-up connection you just created. After a few seconds you're on line! You can now send and receive e-mail and do the other things you normally do over a landline connection - although, just a little slower. Remember that GSM communications are currently limited to 9600 bps, which is still more than adequate for e-mail.

As Andrew Seybold wrote in the July/August 1998 issue of *Handheld PC Magazine*, the growth in both wireless communications and handheld computers is creating a powerful marriage of technologies. With a handheld computer and a mobile phone you can access information almost anywhere you go: with only two small bulges to spoil the line of your suit. The possibilities are endless, but for the moment at least, I'm just happy knowing that wherever I may go, I can always check my e-mail and read my Dilbert strips. ■

FULLFILL ALL YOUR MOBILE PC NEEDS

A One-Stop Palmtop Shop - Hewlett-Packard Mobile PC Experts

Why waste time scurrying from place to place searching for Hewlett-Packard 660/620/360/200LX Palmtop PC or HP OmniBook Notebook PC and then some place else to find the right accessory? We are Your One-Stop Palmtop Shop®. You can count on us to supply you with everything you may need for your HP Mobile PC, Sandisk flash cards, modems, leather cases, auto power adapters, etc. We are an exclusive Hewlett-Packard dealer offering large inventory, quick delivery, and competitive prices. You will always deal with a live person, no voice mail.

Whatever you need for your HP Palmtop, one call get it all. We do trade-ins, service & upgrades incl. DoubleSpeed and up to 32MB RAM on HP200LX with the quickest turn-around time in the market. Create a more powerful business tool when adding a wireless service to your mobile PC. We know the wireless products.

The way I use Microsoft Windows CE devices has changed a lot since I got my first Cassiopeia A-11 back in November of 1996. I now use a Hewlett-Packard 620LX Handheld PC and an Everex Freestyle Executive Palm-size PC to do things I never even tried to do on a desktop PC. Here is an account of a long, but rather typical day in my life, with an emphasis on how Windows CE fits in.

6:00 A.M. Time to get up and get ready for work. While I'm doing this, I log onto my ISP from my desktop PC, and download my personal e-mail and Mobile Channels. Before I leave the house I'll synchronize my Everex Freestyle Executive Palm-size PC with my desktop PC, and download this information to the Freestyle. I also download newsgroup messages directly to the Palm-size PC (The Freestyle Executive has a 33.6k modem built into its docking cradle). I use bMobile News (Palm-size PC version available from bSquare, Web: www.bsquare.com) to read the newsgroup messages on my Palm-size PC (see Screen

ABOUT THE AUTHOR

Craig Peacock currently runs two web sites on Windows CE, Web: www.palm-pc.org.uk and Web: www.craigtech.co.uk. He is in the process of finishing a book on Windows CE, to be titled Windows CE Made Simple. It will be published by Butterworth Heinemann (Web:) and will hopefully be out before the end of the year.

department of a bank and the first thing one of us has to do is perform morning system checks to make sure all services are working. There are a number of steps we have to follow and a number of things we have to check for in this process. We used to keep a paper checklist (some of my colleagues still do), but I replaced that with a Palm-size PC program called ListPro (H/PC and Palm-size PC versions available from Ilium Software, Web: www.iliumsoft.com). It's great for organizing all kinds of lists. I'm also in the process of testing a database created to track this process. The database was created using Visual CE (runs on a desktop PC, but downloads databases to H/PCs or Palm-size PCs, from Syware, Web: www.syware.com).

Dynamic Software, Web: www.london-map.com). London Access is a London-specific map program similar to Microsoft's Pocket Streets. I quickly find the location of the supplier and the nearest train station (see Screen 2). London Access is only available for Handheld PCs (Screen 2).

9:15 A.M. The meeting starts and the new supplier asks me for the names and phone numbers of bank employees they might have to call. I have such a list in a Pocket Word document on my HP 620LX. I noticed on the way into the meeting that the supplier's office has a number of HP LaserJet printers with infrared ports. I ask if I could use one for a minute, and quickly print out five copies of the list using

A Long Day in the Life

By Craig Peacock

Windows CE helps this Englishman pack a lot of work and play into a long, but typical day.

1). I use Microsoft Inbox and Channel viewer for the Mobile Channels and e-mail (Screen 1).

6:30 A.M. I catch the train for my daily 30-minute trip into central London. I use the time to read the e-mail, newsgroup messages, and the Mobile Channels stuff I downloaded earlier. I usually find a seat on the train, but occasionally have to stand all the way into London, hanging on to a strap the whole journey. The Freestyle's one-handed navigation means that I can hang on and still read/access information.

7:15 A.M. I grab a cup of coffee and start my morning routine. I work for the IT

7:30 A.M. It's time to prepare for the first meeting of the day (the weekly IT department meeting). A quick check of Tasks shows me that all of the things I had to accomplish for the meeting are done. I take notes of the meeting in the Palm-size PC's Note Taker application, and transfer the things I have to accomplish to Tasks.

8:30 A.M. I have to leave for a meeting with a new supplier. I've never visited this company before, and have no idea which train station I'll have to get off at, or how long it's going to take me to get there. I pull out my HP 620LX and start up London Access (H/PC version available from

bPRINT (H/PC and Palm-size PC versions available from bSquare Technologies, Web: www.bsquare.com). Back in the meeting, I take notes with my 620LX. Everyone else is using \$4000 top-of-the-line laptops. The meeting lasts over two hours, and three of the laptop users have to connect to their AC adapters because of low battery messages. I did not.

11:30 A.M. Time to get a quick bite to eat. But first I fax the meeting notes to a colleague who is working at home today. I slip my Nokia Datacard (wireless modem) into my 620LX's PC Card slot and use another bFAX Professional (another bSquare prod-

Screen 1: I read newsgroup messages on my Palm-size PC using bSquare's bMobile News.

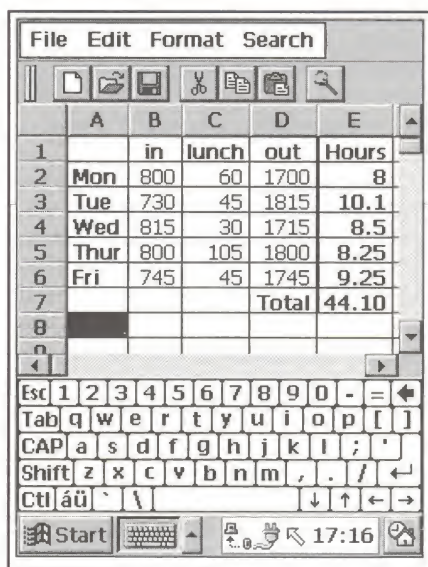

Screen 2: I use London Access on my HP 620LX when I need to find the location of an unfamiliar address in London.

uct) to fax the notes to him. While at lunch, I decide it's time to check my office e-mail. Again using my H/PC and the Nokia wireless modem, I log on to one of the bank's dial-in servers and use Cadenza (Palm-size PC version in development, H/PC versions available from CommonTime, Web: www.commontime.com) to check my Lotus Notes e-mail. (Cadenza also lets you run custom Lotus Notes databases on an H/PC.) After logging on, I check my e-mail. No urgent messages are waiting. [The bank I work for is also evaluating two other corporate solutions available for Lotus Notes users: Mail-on-the-Run (from River Run Software, Web: www.riverrun.com) and ASL Connect (from Advance Systems Limited, Web: www.asl.com).]

12:30 P.M. I'm on the train again, heading back to the office, and it's time to relax a little. There's no better way to take my mind off of things, than to play a little TankZone on my Palm-size PC (Screen 3) (H/PC and Palm-size PC versions available from Sticky Software, Web: www.sticky.net). Sometimes I prefer to play WarriorCE (H/PC version only from Surerange Ana-

Screen 3: I relax a little on the train, playing a quick game of TankZone on my Palm-size PC.

Screen 4: Pocket Spreadsheet adds a much-needed spreadsheet program to the Palm-size PC.

lysis, Web: www.surerange.com). It looks great in color on the HP 620LX. There are so many games available for the H/PC and Palm-size PC that it's hard to choose between them. Other favorites include BFM Casino, game package includes 10 popular casino card games (from BFM Software, Web: www.bfmsoft.com), Fun Pack and other arcade classics (from Jimmy.Com, Web: www.jimmy.com), Backgammon (from Anyware Consulting, Web: users.aol.com/anyware/), and of course the Microsoft Games Pack for Windows CE, (Web: www.microsoft.com/windowsce).

1:00 P.M. Still on the train and tired of playing games, so I'll enter the contact information from the business cards I received at the meeting. I normally enter new contacts on my H/PC and then synchronize that with my desktop PC when I'm in the office. I have my PC set to automatically synchronize data whenever I connect, so I don't think much about it. Many of my colleagues enter all contact details on their PCs first, and then synchronize with their mobile devices.

1:10 P.M. I'm still on the train when a call from the office comes in over my mobile phone. Someone urgently needs to know some technical information about the office phone system (yea, I do that too). I have my Palm-size PC in hand, so I quickly call up the spreadsheet I use to organize this type of information, and give him the details he needs. I've been evaluating a new Palm-size PC product called Pocket SpreadSheet (available from Surerange Analysis, Web: www.surerange.com) (see Screen 4). As of the most recent version (as of August 16), Pocket SpreadSheet does not support file import and export, which means that I have to re-enter information from other spreadsheets. But Surerange is working on a Windows CE Services filter that will allow drag-and-drop conversion of spreadsheets.

Proficiency™ - the RPN Calculator

- You never have to work with more than one function at a time. Proficiency cuts problems down to size instead of making them more complex.
- Pressing a function key immediately executes the function. You work naturally through complicated problems, with fewer keystrokes and less time spent.
- Intermediate results appear as they are calculated. There are no "hidden" calculations, and you can check each step as you go.
- Intermediate results are automatically handled. You don't have to write down long intermediate answers when you work a problem.
- You can calculate in the same order you do with pencil and paper. You don't have to think the problem through ahead of time.

Proficiency runs on Windows® CE
for the Handheld PC and Windows CE,
Handheld PC Professional Edition software

MVA Software, Inc.
Tel (714) 970-9147 Fax (714) 692-
<http://www.mvasoftware.com>

It should be almost ready by the time you read this article.

1:15 PM I get off the train and grab a cab to the bank's main office (I have to pick up some training manuals). In the cab I decide to send a brief note to a couple colleagues on how the meeting went. Instead of trying to type in the note on the H/PC, I simply make a short voice recording and e-mail the WAV file.

1:30 PM. I've got the manuals and am in a cab on the way back to my office when I get another phone call. This time it's a colleague who needs contact information for a client. Again, I slip my Nokia wireless modem card into my H/PC and I use SMS Sender, version 1.5 (from Lumir Vanek, Web: www.ktpquantum.cz/handheld) to send the information directly to his mobile phone. Here in the UK, and it lots of other places around the world, we can use a system on our Mobile Phones called SMS (Short Message Service). This allows us to send short text messages of up to 160 characters to other mobile phones. The messages are viewed on the mobile phone's small LCD display, and no special software is required on the phone.

Note: Future generations of mobile phones will come with some very interesting capabilities, including the ability to perform electronic commerce and download e-mail and other information directly to the phones. In fact, tests of such systems are already underway in Europe. The implications are amazing, and amusing. Imagine you are stuck in a train station on a hot day, with no change in your pocket and a soda pop machine staring you in the face. You pull out your mobile phone, dial the phone number of the pop machine (printed conveniently on the front of the machine), and key in your request using the phone's number pad. Out pops the pop, billed to your mobile phone account. Here are some Web sites that discuss these technologies: Nokia, Web: www.wirelessfuture.nokia.com/ and www.nokia.com; The WAP Forum, Web: www.wapforum.org/; Ericsson, Web: www.ericsson.se; Motorola, Web: www.motorola.com; DeLaRue, Web: www.delarue.com/.

1:50 P.M. I'm almost back at the office, but I still have time to enter my expenses into Pocket Finance (H/PC version available from Landware, Web: www.landware.com/. Palm-size PC beta version available from the developer, Anyware Consulting, Web: users.aol.com/anyware/wce/patm/default.html). I've been using Pocket Finance on my H/PC for ages, and now I'm trying the beta version on my Palm-size PC. It's great to

have it with me all the time, to keep track of the money I spend so that I can make sure I claim it back. [Note: My HP 620LX comes with a built-in copy of another expense tracker, Quicken ExpensAble (H/PC and Palm-size PC versions available from On the Go Software, Web: www.onthegosoftware.com)].

2:00 P.M. Finally back to the office for a quiet afternoon.

4:00 P.M. My girlfriend and I are going to have dinner with some friends this evening and we need to bring some wine. I open eWallet on my Palm-size PC (H/PC and Palm-size PC versions available from Ilium Software, Web: www.iliumsoft.com). The eWallet program is an electronic version of a paper-based card file system, and is used to store miscellaneous information on an H/PC or Palm-size PC. I go to the Wine card, where I have listed the various wines my girlfriend and I have tried. The card includes comments about the wines: whether we like them or not, and where we bought the wine. I pick out an appropriate wine, available at a wine shop I'll pass on my way home.

We're going to have dinner with our friends Mike and Helen, and I remember that Mike wanted to see the new design for my Web site (www.palmpc.org.uk). I use Whack Force (from Ruksun Software, Web: www.ruksun.com) to download my beta site from my test server to my HP 620LX. Whack Force lets you download Web pages, which you can then view off line with Pocket Internet Explorer. bREADY (from bSquare Technologies, Web: www.bsquare.com) has an "Import from Web" option with capabilities similar to Whack Force.

5:00 P.M. My working day is almost over. I do a lot of my work on the H/PC, and it's time synchronize it with my desktop PC. It's a relatively slow process using a serial connectivity cable, but I've discovered a way to make it faster. I use the Low Power Ethernet Adapter Card (from Socket Communications, Web: www.socketcom.com/wceprods.htm) to connect to my desktop PC. I can synchronize my H/PC with my desktop PC in less than 10 seconds (and back it up in about 45 seconds). Socket recently started offering the Ethernet Adapter in the CompactFlash form-factor, making it possible to connect and synchronize a Palm-size PC as quickly.

5:15 P.M. Just before I leave work, I log onto my ISP via my Everex Freestyle Executive and the 33.6k modem built into its portable docking cradle. I download all

Screen 5: Earlier, I'd used Whack Force from Ruksun Software, to download an image of the Web page I'm redesigning. I then use Pocket Internet Explorer on my H/PC to show my friends the new design for my Web site.

my personal e-mail so that I can read and respond to it on the train journey home.

6:30 P.M. I arrive home and log on one more time to send the e-mail responses I wrote on the train ride home.

7:00 P.M. We leave for our dinner engagement. On the way, I receive an urgent call from the office. I need to connect to one of the UNIX servers at the office and sort out a problem. From the back seat of a taxi, I use my H/PC, my Nokia wireless modem and Telenet Force (from Ruksun Software, Web: www.ruksun.com) to log onto the server and fix the problem. I then use Scotty FTP (also from Ruksun) to download one of the server's log files to my 620LX for more analysis tomorrow.

7:30 P.M. We arrive at our friends' home and I use the HP 620LX to show Mike my new Web site. Mike didn't like a few things, so I ran up a copy of HTMLEdit (available from bSquare Technologies) and changed the pages there and then on my HP 620LX (see Screen 5). Later in the evening I decided to demonstrate how easy it is to record voice notes. Mike and Helen had both mentioned that they liked the wine, so I make a quick voice-memo to that effect. Later, when I review my voice memos, I'll transfer that information to the wine list I keep in eWallet.

11:30 P.M. I arrive home and connect my Palm-size PC to its AC adapter to recharge it over night. I don't bother doing this with my HP 620LX. It recharges quickly, in a couple of hours, and I have an AC adapter at work. I'll recharge it tomorrow morning at the office.

Tomorrow is another day, and it's my turn to cook dinner. My cooking is edible, but according to some, only just! It's too bad, with all the creative Windows CE software now available, that no one has created a good electronic cookbook.

Good night! ■

Handheld PC Users Recommend Their Favorites!

What to buy? Software, accessories, and tips for Windows CE PC Companions.

What do the day-in, day-out users of PC Companions use and recommend? This series lets PC Companion users share their opinions about the truly useful additions you can make to your Handheld PCs and Palm-size PCs. What are your top PC Companion products? E-mail me at rich@thaddeus.com, and let me know.

The 10 Essentials for a Healthier, More Productive H/PC

By Edward Zabrek, M.D.

1. Backup frequently!

If you have an H/PC w/ a backup utility, use it whenever you change important data! If you don't, get one. This may seem excessive, however if you ever crash, you'll be glad you did. The two best bundled programs I have seen are Compaq's "Flash Backup" (Compaq 2010c and 2015c), and HP's "BackUp". For a complete PC Card backup, I recommend and use a shareware program known as DBBackup from John Schettino (Schettino@writeme.com).

2. Carry your H/PC in a padded case.

Get one that will allow for storage of extra RAM cards, batteries, an extra pen and or stylus. If you ever drop your H/PC, your investment in a good case will more than pay for itself! HP has a custom case (made by Targus) that works extremely well for the 300/600LX series of H/PCs. Most H/PC and Palm-size PC manufacturers have them available as accessories.

3. Keep extra batteries with you at all times!

Get extra batteries and keep them with you at all times. If your unit uses a rechargeable battery pack, get an extra one and keep it charged at all times. If possible, carry these with your unit in the carrying case.

4. Get Pocket OnSchedule 2.5 for Windows CE.

This alternative to Pocket Outlook enhances the innate functionality of any H/PC. Features include unlimited databases, dialing support, Internet access, direct e-mail, call/e-mail logging, contact information templates and customized layouts.

Fully compatible with the desktop version, On-Schedule 97, as well as other major PIMs and contact managers. Download the 30-day trial version from www.odyssey-inc.com. Once you try it you'll never use Pocket Outlook again!

5. Get a screen protector and cleaner.

You end up tapping the H/PC's screen a lot, leaving fingerprints, or scratches. Concept Kitchen's PDA Starter Kit contains a removable plastic screen protector, and a disposable and reusable set of cleaning cloths. It's the best package I've seen and will pay for itself many times over through the years (www.conceptkitchen.com).

6. Clean up desktop!

This makes the H/PC a lot easier to navigate, and saves you many keystrokes in searching for your commonly used programs. Delete infrequently used items on your current desktop. If you have a number of games, save them to a desktop folder.

7. Get a color-screen H/PC.

They are so much easier to read than the "grey/green" monochrome units. They do use more power, so follow common sense about conserving your batteries (connect up to an AC adapter whenever possible, don't overuse the modem or backlighting, carry spare batteries).

8. Get an extra AC adapter and connectivity cable.

If you use your H/PC or Palm-size PC with your office and home computer, have an AC adapter and connectivity solution for each location. Manufacturers offer these as accessories. It will cost you a little more, but you won't have to carry the excess baggage around.

9. Get eWallet!

This nifty add-on program will keep all of your important private data (e.g. credit card numbers, phone cards, etc.) secure if any unsuspecting hands or spies get a hold of your unit with or without your permission (www.iliumsoft.com).

10. Get Randsoft's Harmony 98 multiple PIM synchronizer.

This is a great replacement for the ActiveSync™ program that comes with your H/PC. Harmony synchronizes your PIM data with Lotus Organizer, Lotus Notes, Symantec ACT, Goldmine, and nearly every major desktop PIM on the market. Randsoft is constantly adding to and updating this program to accommodate the most recent and popular contact managers on the market. It is much faster, and more efficient than anything I have ever seen (www.randsoft.com). ■

ABOUT THE AUTHOR

Dr. Zabrek is a practicing obstetrician-gynecologist in Houston, Texas. He is also the chief technology correspondent for OBGYN.NET (www.obgyn.net, a website for obstetricians, gynecologists, and related industry persons.) His ultimate goal is to create the perfect electronic medical record with a major focus and link to the Handheld PC.

Try Before You Buy!

Download these handheld PC and Palm-size PC programs for free and try them before you buy them!

Experience is the best teacher, and also the best product reviewer. Fortunately, many of the software programs developed for Windows CE are made available as commercial demos, shareware, or freeware, letting you try the program first to see if you like it. This new section in Handheld PC Magazine will take a brief look at such software. We'll describe it, give you a few brief editorial comments about the product, and then let you know where you can get the software for free.

All software reviewed by Rich Hall, unless otherwise stated.

MazeCraze

MazeCraze: A Pac Man clone for the H/PC

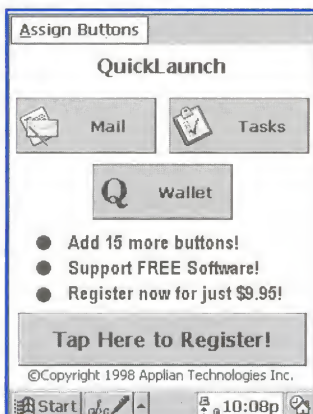

This Pac Man clone provides arcade entertainment on H/PCs (Palm-size PC version out soon). As with the old Pac Man, you maneuver your little gobbler around a maze, devouring dollars left in your path, and trying to avoid enemy bombs, bulldozers, and more. It has a variety of sound effects, which I immediately turned off so the publisher wouldn't think I was having too much fun. You might want to set the speed of the game slower at first.

DOWNLOAD FREE demo at www.fielddsoftware.com

MazeCraze price — \$19.95; Use with H/PCs; Palm-size PC version coming; Sales contact: MobileSoft; Phone 800-773-1523 or 330-673-7110; Web www.mobilesoft.com.

QuickLaunch

Promoted as a “button extender” for the Palm-size PC, this simple utility lets you access Palm-size PC applications quickly. Open QuickLaunch and tap on the applications button and it pops up. QuickLaunch lets you assign any built-in or user-installed application

Free version of QuickLaunch for the Palm-size PC lets you assign three quick launch buttons.

to its screen buttons. Palm-size PC users already have user-configurable hardware buttons to open four applications (Start, Settings, Buttons, Program). But if you find yourself regularly accessing more than four applications, QuickLaunch may be for you. Assign QuickLaunch to one of the hardware buttons. Then when you want to start an application, all you have to do is press a button and tap the screen.

The free version lets you assign three QuickLaunch buttons; the commercial version lets

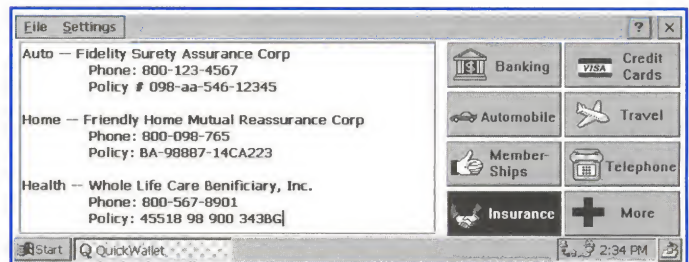

you assign 18. The free version is alright for checking out the program, but three user-assigned buttons is too few. If you like it, pay the \$9.95 for the full 18-button version.

DOWNLOAD FREE from www.applian.com
Freeware; Commercial version with 18 user-assigned quick launch buttons — \$19.95; Use with Palm-size PC only; Contact Applian Technologies; Phone 415-831-1499; Fax 415-668-6668; Web www.applian.com.

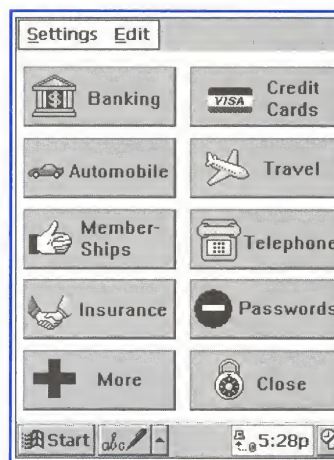

Commercial version of QuickLaunch for the Palm-size PC lets you assign up to 18 quick launch buttons to your Palm-size PC.

QuickWallet

QuickWallet for the H/PC

Most everyone keeps important information on cards in their wallet. These cards include credit cards, ATM cards, phone calling cards, drivers license, social security card, and more. QuickWallet lets Windows CE users keep this vital information on electronic “cards”

QuickWallet for the Palm-size PC

in their H/PC or Palm-size PC. QuickWallet is a simple database with seven standard “cards” (i.e., categories of data) and a text screen associated with each card. The screen above shows the Insurance card, listing policy numbers and contact information for auto, home, and health insurance. In addition to the standard cards, Quick Wallet has seven customizable cards to hold other important information. For example, I have a card labeled “Xmas List.” Whenever my wife, son or daughter

mention something that might qualify as a Christmas present, I slip it in this card.

The application is limited to seven standard cards and seven customizable cards. Each card can hold only one screen of information. You cannot export this information or print it out. The nice thing about QuickWallet is that the application is free. You can download and use it for as long as you like without paying a cent. A commercial version that includes password protection is also available.

DOWNLOAD FREE from www.applian.com

QuickWallet price — free; Commercial version with password protection — \$19.95; Use with H/PCs and Palm-size PCs; Contact Applian Technologies; Phone 415- 831-1499; Fax 415-668-6668; Web www.applian.com.

Logeny's Fitness Tracker

[Note: "Stop Dieting and Start Losing Weight," by Bil. Alvernaz, was the most successful article we've ever run in *Handheld PC Magazine* (see Sep/Oct 98, page 27). Bil. had literally thousands of e-mail requests for his home-grown Pocket Excel fitness system. I thought I'd better mention this program as a follow up.]

Logeny's Fitness Tracker lets you set fitness goals and track your progress graphically.

Logeny's Fitness Tracker is a Palm-size PC application that lets you to set goals for, and track the progress of your fitness or training program. These goals are presented graphically and your daily, weekly, or hourly progress towards the goal is recorded and displayed.

For example, you can set a goal for your weight in two months time. A weight loss curve will be displayed. Each day as you enter your weight on your Palm-size PC, you can see how well you are keeping to your plan. Fitness Tracker has weight, exercise and calorie intake series built in. In addition, you can create up to 9 of your own data sets to keep track of.

I have to admit that I had a hard time figuring out how to use the demo version. Hopefully the commercial version will come with documentation that explains this, and give some samples.

DOWNLOAD FREE demo from www.logeny.com/

Price: \$29.95; Use with Palm-size PC; Contact: Logeny Inc.; Phone: 503-622-4055; Fax: 503-622-4537; E-mail: hk@logeny.com; Web: www.logeny.com/

Palm Accounts

This standalone personal finance application for the H/PC lets you track and schedule financial transactions for multiple accounts, in multiple currencies. The H/PC's international settings are automatically entered as the date of the transaction, unless you overwrite them. A scheduling facility enables recurring transactions to be entered automatically as they become due.

Data views can be customized to change sort order, column order, hide or show specific columns, color, font size and style. Navigation and data entry is facilitated by pop-up menus and user definable defaults for data entry screens. Palm Accounts comes complete with online help, user's guide and sample data.

Palm Accounts is a powerful little program that is easy enough to set up and use. However, it is a standalone product and does not synchronize with Microsoft Money, Quicken, or other desktop personal financial managers. This means that it is intended to be used as your only financial tracker. You can back up its data file.

DOWNLOAD FREE trial version at www.stargate-software.co.uk

Price: \$25.00; Use with H/PC with Windows CE 2.0 or later; Contact Stargate Software Ltd; Email: sales@stargate-software.co.uk; Web: www.stargate-software.co.uk

Date	Description	Amount	Balance
	Beginning Balance	362.25	362.25
	Check: Lunch, The Grove	(8.54)	353.71
	Deposit: Reimbursement Co	375.76	729.47
	Cash: Travel expenses	(47.26)	682.21

Palm Accounts lets you track personal finance transactions on your H/PC and view your accounts, scheduled transactions, a list of currencies you use and their relative value, and more..

Pocket Universe

H/PC and Palm-size PC versions of Pocket Universe display the positions of the moon, planets, and nearly 5,000 stars.

This guide to the night sky displays the positions of the moon, planets, and nearly 5,000 stars. Pocket Universe includes lunar phases, outlines for major constellations, and advanced features like the ability to lock on a planet and watch its position during time changes.

Pocket Universe lets you zoom in and out on the star map, set the viewing location, select the magnitude of the stars to be displayed, and more. I had no problem setting Pocket Universe up on my Palm-size PC and setting the viewing location to Fairfield, Iowa, U.S.A. (41° North, by 91°55" West). A number of the features are hobbled on the demo version, but it will still give you a good idea if Pocket Universe is for you.

If you're going to do star gazing, you need to be out in the dark, away from city lights. The commercial version has an option that inverts the screen, so Pocket Universe displays black dots on a white background. This and carefully adjusting the contrast will help improve the readability of the display. But you'll be using your H/PC or Palm-size PC's backlighting a lot, and may deplete the batteries. It might be wise to take a small flashlight along and use that to illuminate the screen.

DOWNLOAD FREE DEMO from: <http://users.tibus.com/john.kennedy/Palm/software.htm>

Price: \$30.00. Use with H/PC and Palm-size PC; Contact: Sticky Software; Email: uni-ver@sticky.net; Web: <http://users.tibus.com/john.kennedy/>

TankZone

If you like the old arcade "tank battle" games, but hated all the quarters you spent, you'll like TankZone, from Sticky Software. Roam around the landscape on a search and destroy mission. Hide behind objects and keep one eye on the radar, which lets you know where the bad guy's tank is. Fire fast and first, but keep an eye on your ammunition level.

TankZone is available in H/PC and Palm-size PC versions. The author makes this available as "charity-ware." Try it for free, but if you decide to keep using it, make a donation to the charity of your choice. With all the quarters you'll save, you can afford the donation.

DOWNLOAD FREE CHARITY-WARE from: <http://users.tibus.com/john.kennedy/Palm/software.htm>

Use with H/PC and Palm-size PC; Contact: Sticky Software; Email: universe@sticky.net; Web: <http://users.tibus.com/john.kennedy/>

TankZone lets you battle enemy tanks on your PC Companion.

HandMap 1.6e

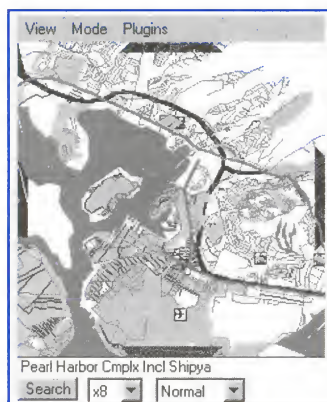

An electronic street directory that lets you display a city or regional map, pan around the map, and zoom in and out for greater or lesser detail. HandMap lets you search for features (streets, parks, etc.) by name. The map modules form part of a world-wide network of maps, all linked together.

The brief documentation that came with the demo version says that you can use it with the H/PC and Palm-size PC, but the program does not come with a setup utility. That means that you have to use Windows CE Services to copy the files over to the H/PC or Palm-size PC.

This method of installation does not place a reference in the Start menu, which means that you have to use Explorer to start HandMap. Unfortunately, Palm-size PCs do not come with a built-in Explorer application. Fortunately, the Cassiopeia E-10 comes with an Explorer-like add-on called File Find, which lets you view files and launch programs. Users of other Palm-size PCs can use the Palm Explorer application, described on page 39, to view files and launch programs on Palm-size PCs.

The standard version of HandMap and a sample map are available for free at the Web site listed below. HandMap Deluxe, supporting "layered" map format, is available for \$16.

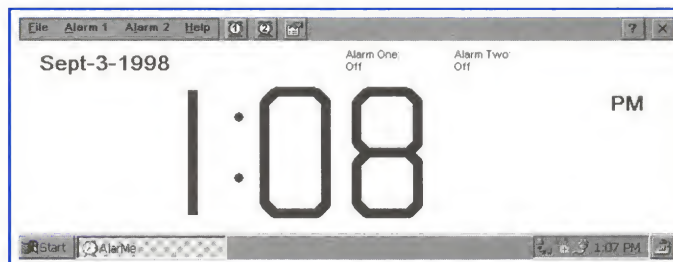

DOWNLOAD FREWARE at www.cemonster.com/index.html

HandMap displays city or regional maps on a PC Companion (Palm-size PC display shown here), and lets you zoom in and out on desired locations.

or at developer's Website. Use with H/PC or Palm-size PC; Developer: Evolutionary Systems; Phone: 510-658-5244; E-mail: support@evolutionary.net; Web: www.handmap.net/

AlarMe

AlarMe displays a digital alarm clock on your H/PC and lets you use it as a bed-side travel clock.

When you're on the road, why take an alarm clock with you when you can use this simple little application to turn your H/PC into one. Displays a large, clear digital 12 or 24-hour clock that lets you set two alarms. Select from different .WAV files for the alarm sound, and adjust the volume and "snooze time." Hit the Space Bar to snooze, hit Enter to stop an alarm.

AlarMe works fine on batteries, but the H/PC's screen times out. It's better to connect your H/PC to its AC adapter and leave it on the nightstand by your bed.

DOWNLOAD FREE DEMO from www.cemonster.com/index.html

Price: \$15; Use with H/PCs; Developer: Eppen Software; Web: www.eppen.com/alarmer/

Offline File Converter

Installs on your desktop PC and lets you convert back and forth between desktop PC and Windows CE file formats. This ability is particularly handy for e-mail communications between Windows CE devices and desktop PCs. For example, let's say you were going to attach a Office 97 Word document to an e-mail you were sending to an associate. This associate is traveling at the moment, with his or her H/PC. You could convert the document to Pocket Word format on your desktop PC, and attach the Pocket Word document to the e-mail. Likewise, if the associate e-mailed you a Pocket Word document, you could convert it to the desktop Word format and open it. I use this handy utility frequently.

Documentation is non-existent, but the program is very simple to use. I was able to convert back and forth between desktop and Pocket versions of Word, Excel, and PowerPoint documents. This is free-ware, so once you download it, it's yours to use.

DOWNLOAD FREWARE at www.cemonster.com/index.html

Use on Windows 95 desktop PC; Developer: NStall Company; Web: www.nstall.com/

The Offline File Converter displays an Explorer-like screen that lets you select and then convert files back and forth between desktop PC and Windows CE file formats.

PC COMPANION NEW PRODUCTS

Hardware

Communications

Low Power Ethernet CompactFlash Card

A CompactFlash version of Socket's LP-E Card that plugs into the CompactFlash slot of any Palm-size PC and many H/PCs, giving the user a fast, location independent way to synchronize with a desktop PC, share networked files, and browse the office intranet or the worldwide web. The LP-E connects to a Windows network via 10BASE-T twisted pair cable and transfers data at the rate of 10 megabits per second — 500 times faster than serial port communications. The CompactFlash size Low-Power Ethernet Card operates on 3.3 volts rather than 5 volts, conserving the PC Companion's batteries.

Price: \$149

Use with H/PCs and Ps/PC

Available through Socket resellers world wide.

Contact: Socket Communications, Inc.

Phone: 800-552-3300 or 510-744-2700

Fax: 510-744-2727

Email: LPE@socketcom.com

Web: www.socketcom.com

Serial I/O CompactFlash Card

Inserts into a CompactFlash slot and adds an industry standard DB-9 serial port to H/PCs and Palm-size PCs. This lets users connect to external modems, printers, GPS devices, barcode readers, and other input/output devices using a standard serial cable. Peripheral suppliers do not have to provide different interface cables or converters to match each model of H/PC or Ps/PC.

Price: \$169

Use with H/PCs and Ps/PCs with C/F slots.

Available through Socket resellers world wide.

Contact: Socket Communications, Inc.

Phone: 800-552-3300 or 510-744-2700

Fax: 510-744-2727

CoolCalc for the Palm-size PC

Adds up to 10 different calculators to your H/PC or Palm-size PC, including a standard calculator, two scientific calculators (one with RPN, one non-RPN), and a programmer's calculator. You can customize any calculator or create your own. CoolCalc lets you reposition buttons with your stylus, and change the function, sound, and appearance of each button. Macro feature lets you build your own functions..

Price: \$19.95

Communications

GlobalPulse for Windows CE

Software-only solution, that lets you connect the H/PC to a GSM-compatible mobile phone via serial cable. Connect with the Internet, send and receive faxes, pick up and send e-mail, and use the Short Message service (SMS) to send brief text messages to mobile phones. Also comes with free Phonebook manager so you can edit/add phone numbers, so if you lose the phone, you don't lose your numbers. GlobalPulse for Windows CE is initially available for Hewlett-Packard H/PCs, with connectivity cables for Nokia GSM phones. TDK indicates that GlobalPlus will be available for other H/PCs, handsets and Palm-size PCs in the future.

Data Entry

ART recognition

Adds voice recognition and enhanced handwriting recognition to Palm-size PC. Bundle includes:

SmARTwriter — Adds handwriting recognition that learns to recognize your handwriting instead of requiring you to learn its characters. Initial training takes five minutes. Can train smARTwriter to recognize symbols as words (i.e., "b/c" can stand for "because"), insert unlimited strings of text, or launch applications. Pop-up editing window lets you easily customize smARTwriter.

Pocket Commander — Adds voice command capability to your Palm-size PC. Launch or open any application or file or send voice mail via e-mail with a voice command. Insert strings of text with a user defined voice command. Pocket Commander recognizes any language, voice or accent.

Price: \$59.95

Finance

Palm Accounts

Track personal finance transactions on your H/PC. Palm Accounts supports multi-currency transactions and lets you track multiple accounts. Its features include transaction scheduling, user definable transaction codes, categories and sub-categories. Palm Accounts uses the standard Windows CE international settings to determine how it should display numbers and dates, and is Y2K compliant. Palm Accounts is a stand-alone product and does not synchronize with Microsoft Money or Intuit's Quicken.

The Mill v1.0

The Mill is believed to have a common origin with Tit Tat Toe and Pachisi, in remote antiquity. In Elizabethan times it came to be called "Nine Men's Morris", or simply "Morris", from its fanciful resemblance to the morris (Moorish) dance. The object of The Mill is to lay the 18 pieces on the board and to move them in order to arrange three pieces of one's own color on a horizontal or vertical (not diagonal) line.

VFR add-on for TeleType GPS software

The add-on module to the TeleType GPS system lets VFR pilots display moving maps on their H/PC or Palm-size PC showing airport locations, VOR's, tower/unicom frequencies, airport altitudes, runway information (length and type). Special use airspace, parachute jumping locations, and man-made obstructions are also depicted. The software graphically shows runway configurations for the entire U.S. An unlimited number of way-points can easily be entered into the system along with routing information. Other features include an odometer, bearing information, distance measuring, and a host of other navigational aid information is also provided.

Synchronization

ASL Connect v.2.0

A software program that enables remote connection and synchronization of Windows CE devices to corporate systems over any networking infrastructure. This latest version adds support for Lotus Notes/Domino Server. This means that mobile workers can now synchronize with any custom ODBC (e.g., Oracle, Ingres, Sybase, SQL Server, DB2, etc.) or Notes database within the corporation as well as retrieving their e-mail,

updating their schedule, actions and addresses. Support for Microsoft Exchange will be delivered shortly.

System Info v1.0

Lets you see the current system status of your handheld PC. An icon will be placed in the system tray while System Info is running. This icon represents the status of your batteries. If you are plugged into power, an AC icon will appear. While running on batteries a battery is displayed. The battery contains 5 bars representing 0-100 percent battery remaining. In addition to the icon mode, System Info can run in full-screen mode, providing details about the remaining battery status, backup battery, free memory, and free storage space. You can also get some benchmark statistics on the speed of your H/PC.

Training

Windows CE Device Driver & HAL Programming

Provides detailed instruction for porting Windows CE to a hardware platform. The course covers writing the OEM Adaptation Layer (OAL) for Windows CE, some of the topics include:

- A review of the Windows CE operating system.
- A discussion of the hardware requirements for developing for Windows CE.
- Writing a Windows CE bootloader.
- Writing the HAL layer underneath the kernel.
- Writing the basic set of drivers necessary to bring up a Windows CE system.

Course presents this information in a practical way with actual code examples demonstrated on Windows CE hardware.

The class will incorporate technical material provided by BSQUARE Corporation and will be taught by Windows CE expert Douglas Boling from David Solomon Expert Seminars. Boling has been working with Windows CE since its inception, and has played a lead role in porting Windows CE to various hardware platforms, including the ODO hardware reference platform. The new seminar is the latest addition to the Windows CE track already offered by David Solomon Expert Seminars, which also includes "Programming Windows CE for Win 32 Programmers."

This Expert Seminar is available for on-site delivery worldwide (minimum 10 persons) or at public offerings scheduled bimonthly. A more detailed course description, and registration information can be obtained from the following sources.

HANDHELD BUSINESS SOLUTIONS

Why purchase a handheld computer and WASTE your money? PYGMY Computer Systems will show you how to USE your handheld computer for your specific industry needs.

PYGMY is dedicated to providing not only the best hardware prices around, but also offers a complete business solution for your specific industry needs. From

outside sales reps to in home health care specialists, PYGMY will provide a one stop shop for software and hardware.

Take orders, charge your customers and update inventory from the palm of your hand.

Wireless Packet Data

Packet Data is a method of transmitting digital "packets" of data over a wireless network. Many in the mobile computing and communications industry seem to believe that wireless packet-data networks offer the best mode of communication for data and information typically sent and received by mobile computing devices.

We are certainly packet-data advocates, but we are also realists. Packet data is important, but it is not necessarily the best form of wireless transport in all cases. Perceived problems with packet data include slow data speeds and high costs. But these are minor when compared with the more important issue of using a packet-data network to connect a mobile device back to a user's own desktop or the enterprise's LAN.

Today, such a connection requires a dedicated telephone line between the LAN or the desktop and the wireless network's nearest point of presence. If the Internet or an intranet is used for the bridge connection, middleware and a secure connection are needed. These solutions require attention from the Information Technology manager or IS manager at your company.

Winning his or her support can be difficult at best, unless a wireless data strategy is key to a particular group of mobile workers within the company—sales, service, etc. While many companies and individuals are focusing their efforts on providing easier, secure links between wireless packet-data networks and end-users' data, today there is no one, simple solution.

Having opened our discussion of packet-data communications with these caveats, let us now turn our attention to what is currently available.

In the U.S. today, there are four wireless packet-data networks or service offerings: Metricom's Ricochet, ARDIS/AMSC, Cellular Digital Packet Data (CDPD), and BellSouth Wireless Data (BSWD, formerly RAM Mobile Data).

Ricochet

Metricom's Ricochet networks are available in three major metropolitan areas: San Jose/San Francisco, Seattle, and Washington DC. Ricochet networks have also been installed in about ten of the busiest U.S. airports and on a number of college and university campuses.

Ricochet is not a truly "mobile" data system. It provides a wireless connection for mobile computers that are at rest, anywhere they happen to be within the coverage area. While some users have found that the network can support limited, basic access while the device is in motion, the primary purpose of the Ricochet system is to provide wireline data speeds to computers that are carried to remote sites, set up, and used while stationary.

Today, data speeds of up to 33 Kbps or more are achievable using Ricochet. Even though it is a packet-based network, Ricochet looks and feels like a dial-up network connection to the end-user. This is a real plus for people who are familiar with standard wired

ABOUT THE AUTHOR

Andrew Seybold heads a computer and communications industry consulting and newsletter company, and publishes the well-respected Andrew Seybold's Outlook on Communications and Computing. He has an extensive radio communications and computer background, is recognized as one of the top analysts in these fields, and is a founder and President of the Portable Computing and Communications Association (PCCA). Andrew Seybold's Outlook can be reached at 408-338-7701, fax 408-338-7806, e-mail: lseybold@outlook.com

modem access and who know how to dial up and connect to services they want and need.

The cost to the user, including unlimited Internet access, is about \$30 per month. The wireless modem can be purchased for between \$150 and \$350 depending on the model, or can be leased as part of the monthly service package.

Ricochet is great for those who want dial-up access within the coverage areas available, and where wired phone access is not available. It is also an economical alternative to a second or third phone line in your home, and for fleets of users.

The network's shortcomings include limited coverage and wireless modems that are fairly large and bulky. Even the new modem is about the size of a PalmPilot or Windows CE palmtop.

Metricom has several priorities for their network. The first is to implement its new network backbone in existing coverage areas (Silicon Valley, Seattle, and Washington DC). According to Metricom, this will increase access speeds from in the 28-33 Kbps range to 56 Kbps or higher. They also plan to install the system in up to ten new cities over the next few years. (For more information, visit Metricom's Ricochet Web Site at www.ricochet.net/.)

ARDIS/AMSC

The ARDIS network is one of two packet data-only networks providing nationwide coverage (90% of the U.S. business population). ARDIS was recently purchased from Motorola by American Mobile Satellite Corporation, and its coverage is being augmented by AMSC's satellites.

The network operates at a speed of 19.2 Kbps in most major metropolitan areas, and 4.8 Kbps in the balance of its coverage area. ARDIS is committed to bringing the entire network up to 19.2 Kbps in the near future. Most of its customers are corporations with fleets of users that use the system to extend their own information resources wirelessly. In this application, dedicated wireline circuits are used for the connection between the ARDIS network and the corporate LAN.

ARDIS is one of the two U.S.-based networks that were designed from their inception to provide solid in-building coverage. Because the network was designed to enable IBM service personnel to access the IBM computer network while working on customers' copiers, computers, or other IBM products, good coverage inside buildings was a basic requirement.

ARDIS offers many different pricing

plans depending on the type of service and access a customer needs. For our user profile, we would select the plan for customers wanting access to AirMobile for cc:Mail and Lotus Notes: Unlimited two-way use of the ARDIS system for \$49.95 per month.

Other plans include a bundled wireless modem and 100 KB of data for a monthly charge of \$69.95. There are two plans for two-way paging and messaging. One is \$39.95 per month for up to 100 messages (up to 240 characters in length) with an overage price of \$0.35 per message. The next tier is \$49.95 per month for unlimited use. There are additional charges for operator-assisted messaging and fax send options.

The most attractive aspect of this pricing model is that our user would be charged a maximum of \$49.95 per month. Flat-rate pricing is one of the most important advantages to using the ARDIS network.

At present, ARDIS offers a two-way paging device made by Research In Motion that is about twice the size of the Motorola PageWriter 2000, as well as PC Card modems and built-in modems from Motorola. Because most of its customers are in the vertical markets, many of the end-user terminals designed to be used in conjunction with the ARDIS network combine computing and communications devices that are designed to be vehicle-mounted.

ARDIS would like to provide wireless data services to the re-emerging horizontal market segments that use palmtops, handhelds, and mobile computing devices. However, as with other packet-based networks, the difficulties encountered by users in connecting back to their own desktops or LANs are a stumbling block to providing wireless data services to diverse groups of companies and individuals.

ARDIS/AMSC provides for Internet access, and corporate LANs can be connected via dedicated wireline circuits. Depending upon the type of software installed in the mobile device, and the type of connection between the network and the information resource, ARDIS users communicate over the network in near-realtime.

While the network speed is not conducive to Web surfing, large file transfers, or heavy graphics usage, it is a solid and reliable network for e-mail, dispatch, and short-messaging activities. It is not known whether ARDIS is working with any wireless modem suppliers. However, we believe that there may well be an opportunity for ARDIS to provide wireless access to palmtop and handheld PC users.

ARDIS is not concerned at this time about the amount of data that is sent and received over its network, and its pricing structure is such that users can easily afford to use ARDIS for calendar and phone book updates, e-mail notification, and short messaging. The ARDIS network is also ideal for use as a "command-and-control" center for a total mobile connectivity service.

The industry needs to figure out what it takes to easily connect a packet-data network to corporate LANs, small business LANs, and even individual desktops. Once it does, ARDIS will be ideally positioned to attract individuals and small groups of users in addition to the corporate clients that currently make up the majority of its client base. (For more information, visit the ARDIS Web site: www.ardis.com.)

Cellular Digital Packet Data

CDPD is a packet-data service offered over a number of AMPS analog cellular systems. At present, there is CDPD coverage in approximately 50% of the U.S. CDPD is not a single, nationwide network. It is a patchwork of systems implemented by several cellular providers including AT&T, Ameritech, Bell Atlantic/Nynex, and GTE. However, all of these systems support roaming from other CDPD areas. Costs vary with the type of service and the carrier. Recent pricing changes include flat-rate pricing options offered by AT&T Wireless Services.

Pricing for CDPD services (Wireless IP) varies from carrier to carrier. However, many have gone to flat-rate pricing models for features such as Internet access. Bell Atlantic/Nynex, for example, offers a \$54.95 per month Internet access package when using the service within its own coverage area. Outside the area, the user is billed an additional charge for roaming.

Typical CDPD pricing ranges from \$14.95 per month for 150 KB of data to \$89.95 per month for up to 4000 KB of data. Overage charges start at \$0.10 and decrease to \$0.04 per KB on the \$89.95-per-month plan.

CDPD has attracted more wireless modem vendors than any of the other services. Products include PC Card wireless modems by Sierra Wireless, Motorola, and others. Novatel offers snap-on modems for PalmPilots, and a CDPD wireless modem built into a handheld PC (see review, page 15). Prices for these devices start at around \$400, but we expect this to drop if there is increased demand.

AT&T, as well as several other CDPD network providers, is also promoting a

Telnet Force allows users to connect to a remote server and carry out various operations on the remote system. These activities could include checking one's mail messages, transferring files or talking to another person. Telnet force also maintains a history of previously connected hosts.

F E A T U R E S

Ruksun Software Technologies
<http://www.ruksun.com>

TELNET Force

PocketNet phone service made up of an analog cellular phone with a built-in CDPD modem and software to enable text-based access to the Web. The phone can also be used as a wireless modem by connecting it to a mobile computer.

Some CDPD providers have begun to understand that wireless data is about solutions selling and flat-rate pricing. Bell Atlantic has put together a number of plans to promote its CDPD services and is working with value-added resellers and software companies to provide solutions for a variety of end users, from vertical market groups such as police, service fleets, and delivery vehicles, to individuals who want to be able to "surf" the Net from a wireless device.

CDPD provides coverage to only about 50% of the business population in the U.S., and in-building coverage is not as robust as that of ARDIS or BellSouth Wireless Data. If a customer is within a CDPD coverage area, the service is sufficiently robust to provide a 10K throughput connection, and Web-surfing is tolerable.

BellSouth Wireless Data

The BSWD network (formerly RAM Mobile Data), as with the ARDIS network, was built to provide data-only services. The network was designed to provide solid in-building coverage because many of its users were service personnel who work on equipment inside office buildings.

Today, the system covers more than 90% of the U.S. business population. When BellSouth acquired 100% ownership earlier this year, it pledged to increase network coverage within existing cities and expand to new cities. Thus far, BSWD has added about 500 new base stations. Over the course of the next year, this number will double.

The BSWD system supports seamless roaming, and users are not billed roaming

charges. It is designed to handle both inbound and out-bound data at a speed of approximately 8 Kbps. While the majority of users are from vertical markets, an increasingly large number are signing on as single users or small groups of users interested in e-mail and two-way messaging.

BSWD is well suited for text-based information such as e-mail, short messages, and command-and-control functions. While the system is capable of sending and receiving messages up to at least 16K in length, large file transfers or graphics in any volume should not be sent over the network (nor over ARDIS or CDPD networks).

Information may be sent and received via the BSWD network by connecting the closest network point of presence to a corporate LAN by means of a dial-up or faster dedicated circuit. The BSWD network also provides access to the Internet as well as several intranets. As with CDPD and ARDIS—which are also packet-based systems—connection points must be provided where the network meets the wired infrastructure. Connection points are dedicated or they can move information over the Internet to the end source.

Research In Motion (RIM) makes a PC Card wireless modem for the BSWD network as does Ericsson. RIM also makes a two-way "Inter@ctive Pager" for two-way messaging and paging over the BSWD network. Ericsson and RIM both make wireless modems that can be built directly into computing devices for use in the vertical markets, and several vendors offer vehicle-mounted modems.

BSWD has several types of pricing models. If you want to use an Inter@ctive Pager, for example, there are two tiers of service:

200 500-char messages – \$24.95/month
400 500-char messages – \$34.95/month

Overage is charged at \$0.25 per message. Pager rental adds \$5.00 per month to these prices.

Using our model and counting the number of messages as well as characters, the BSWD customer with the 200* message allowance would pay a monthly cost of \$24.95 plus 201 messages at \$0.25 for a total of \$74.95. If the customer chose the 400-message plan, the total cost would be \$35.20 (\$34.95 plus one over-call at \$0.25).

*While BSWD permits 200 messages per month of up to 500 characters each, for a total of 100,000 characters, each of our model customer's messages counts as a single message regardless of the number of characters. Thus the inbound message count is 308 messages. Adding 30% for return messages, the total number of messages for the month stands at 401.

For more information, visit the BellSouth Wireless Data Web site at www.ram.com/index.html.

Conclusions

We suspect that ARDIS, CDPD, and BSWD will keep the pressure on two-way wireless messaging prices. The trend seems to be to move to flat-rate pricing for an all-you-can-eat model. Such a model works today for these three networks because they are not heavily loaded.

The model does not work for the one-way paging networks we spoke about in the last issue, because they are already heavily loaded. In fact, one-way network providers are trying to find ways to reduce the amount of data sent over their networks. Therefore, changing one-way paging pricing to reflect increased traffic due to computing devices does not seem to be a viable option.

When we compare the above pricing models to current wireless voice pricing at "teen"-cents-per-minute rates, wireless data costs appear to be high. But there hasn't been an overwhelming demand for wireless data services. We believe that as user demand increases, prices will fall and more companies will embrace flat-rate data pricing to keep their users happy. ■

Everything for your PC Companion on 1 CD!

Handheld PC Magazine's 1999 **CE InfoBase**

We know you're busy. So the editors of Handheld PC Magazine have put the most important information and the best distributed software in one place.

You'll find the complete set of 1997-8 *Handheld PC Magazines* (8 issues). That means reviews, how-to's, and CE Web listings are available for quick browsing.

For fast, informed purchasing decisions, you'll discover a complete listing and description of all Windows® CE related products with live links.

Perhaps, most importantly, you'll save hours of searching, filtering, and downloading Windows CE software. We've included over 100 pieces of Handheld and Palm-size PC demoware, freeware, and shareware.

ORDER TODAY!

Available in November. Item # CEIB

Introductory price \$59.95 (regularly \$79.95). \$5 shipping in U.S., \$12 outside U.S.

Special bonus for first 200 who order! You'll receive complete set of 1998 PowerCDs, which you can use until the CE InfoBase arrives. After the first 200 we will send partial sets while supplies last.

INCLUDED:

*Over 100 Pieces of Software!**

- **Information managers** such as personal organizers, stock tickers, and map utilities.
- Scientific, financial, graphing, and conversion **calculators**.
- **Games**, games, games. How about a pool tournament or Space Invaders; play chess, checkers, solitaire; much more.
- Development tools for Windows CE.
- H/PC fax software.
- **Handwriting** recognition software.
- **Internet** tools including FTP, Finger and Telnet, chat, and e-mail applications.
- Extensive collection of **notepads** and writing utilities.
- **Updates** of your current PC Companion software.
- **Utilities** that manage scarce memory, adjust your handheld volume, mix sounds, correct your H/PC time-on via the Internet, capture your handheld's screen, dial your touch tone phone, compress and archive using ZIP format.
- **E-texts** such as The Bible, The Art of War by Sun Tzu, Moby Dick and many more classic and contemporary literary works.
- **Much More**

*Freeware, Shareware and Demoware

Quick Tips & PC Companion Tricks

Thanks go to all the people who have written tips for, and shared their knowledge of the Handheld PC, Palm-size PC and Windows CE. This includes the folks at Microsoft, manufacturers of the H/PCs, and members of online forums supporting users of the PC Companions. Based in part on these sources, all tips are written by Rich Hall (unless otherwise specified).

Eye-stopping start-up screens

The Web is a wonderful place to find graphic images of your favorite art, be it the works of Andy Warhol or James Whistler. I recently went up to the Artchive site (<http://artchive.com/core.html>) to download images from one of my favorites, J.M.W. Turner, a British painter of the early to mid 1800's. The images on this Web site are high-resolution JPGs.

You can use downloaded images of any sort to class up power-on and desktop screens of your H/PC. Here's how you do it.

POWER-ON SCREEN

1. Download and save your image – I do most of my Web surfing from my desktop PC. I right click on the image I want to save, give it a location and name, and save it. Then I open it in a desktop PC graphics program and convert it to a 256-color bitmap image. I also save it as a 640x240 image so that it fits the H/PC's screen. I sometimes have to recapture a portion of the screen so that it fits the 640x240 proportions of the H/PC.

2. Use Windows CE Services to transfer the .bmp image to your H/PC. Connect the H/PC to your desktop PC and start the Mobile Devices application. Pull down the File menu and select "Explore." Then drag the .bmp file from your desktop PC to the Windows directory on your H/PC. I do not convert it to the 2bp format. The image

Screen 1: You can download a bitmap image to your H/PC and set up the power-on screen to display it as a background. Shown here is "The fighting 'Temeraire' tugged to her Last Berth to be broken up" – 1838 – by J.M.W. Turner.

seems to lose quality when you do.

3. Rename the file STARTUP.BMP. This overwrites the default image (the default will be restored if you delete this new image).

4. Open the H/PC's Control Panel, tap on the Owner icon, and make sure you check the box labeled "Display Owner Identification."

Every time you press the ON button, after a power-off the power on screen, with your custom .bmp image, will be displayed (see Screen 1).

DESKTOP SCREEN

You can replace the background image with your custom .bmp image as follows:

1. Download, convert, and transfer the image to the Windows directory of your H/PC, as described above.

2. Open your Control Panel, tap on the

Display icon, and select "startup:" from the Image drop-down list at the bottom of the dialog screen. Tap OK.

Keeping copies of important documents on your desktop PC and PC Companion

It's handy to have copies of certain documents on both your desktop PC and H/PC. For example, your company may keep its product list and description in an Excel spreadsheet or a Word document for easy distribution around the organization. It would be important for a mobile professional in that company, a salesperson for example, to keep a copy of the product list on his

Screen 2: Reduce applications to items on the taskbar, instead of closing them down completely. They open quicker, and right where you left off working.

or her H/PC. It's pretty simple to copy it over and have Windows CE Services convert it to Pocket Word or Pocket Excel format. But it's also possible to set things up so that the H/PC document is automatically synchronized with the desktop PC version whenever that is changed. Here's how you do it.

1. In the Windows CE Services Mobile Devices application (on your desktop PC) pull down the Tools menu, select the ActiveSync Options item, and check the File Synchronization box.

2. Place the desktop version of the document in the "Synchronized Files" subfolder of your desktop's "My Documents" folder. For example, if you have a Phenom Ultra H/PC, the subfolder will be found at: C:\My Documents\PhenomHPC Synchronized Files

3. Open Mobile Devices, then open Explorer, and drag the document from the above folder on the desktop PC to the H/PC's synchronization folder, named: \My Documents\Synchronized Files

Whenever you run ActiveSync, the files in the synchronization folders will be synchronized. Not that you should not change the document names on the desktop or H/PC. In the above example, if the company issued a new product list, you would save it in the desktop PC's synchronization folder and give it the same file name as the document you had set up to synchronize. (Any documents created on the Palm-size PC, such as Note Taker documents and Voice Recorder .WAV files, are stored in the Palm-size PC's "My Documents" folder, and are synchronized by this procedure.)

You can use Windows CE Services to synchronize not only Pocket Contact data, but other file types, including: bitmap images, hypertext documents, Pocket Word and Excel documents and templates, Rich text and text documents, Note Taker documents (from the Palm-size PC), .WAV sound files, and more.

Don't close your applications!

You don't need to close your applications on the H/PC. Notice that whenever you open an application, a button for it appears on the task bar at the bottom of the screen. When you're finished with an application, just tap the button and the application disappears, but the button remains (see Screen 2). When you need to use the application, tap on the button and it pops back up, right where you left off working.

You could close the application each time you were finished with it by tapping on the "X" button, but opening a completely closed down application takes a little longer. I still close down applications I use infrequently, when I'm finished with them. But I leave the common applications – Calendar, Contacts, and Pocket Word – open but reduced when I'm not using them.

Distance between two cities

Your H/PC or Palm-size PC will tell you the distance between any two cities in World Clock. Enter one city as your home city and another as your visiting city. Then go to the visiting city's tab in World Clock. Below the name of the visiting city is a list of facts about the city, which include the day, date and time at the city; the country and area (phone) codes of the city; the nearest airport; and the sunrise/sunset times for the city. At the bottom of this list is the distance the visiting city is from the home city (see Screen 3). If your city isn't in the list provided in Windows CE, you can create a "Custom City" from World Clock's option tab.

The computer algorithm figures the distance based on latitudes and longitudes. This means you can use World Clock to figure the distance (as the crow flies) between any two points on the globe. For example, in 1912 the Titanic struck an iceberg and sank at 41° 46' N Longitude, 50° 14' W Latitude en route to New York City. I can open up World Clock

Screen 3: World Clock's "Visiting City" tab shows date, time, and other facts about the city, including its distance from your home city.

and set my home city as New York. Then I can create a new custom city (I'll call it "Iceberg"), and select it as my visiting city. The facts list in the Visiting City tab tells me that the great ship was just 1,232 miles from New York when she went down.

Access World Clock fast

World Clock lets you set your H/PC or Palm-size PC's date and time. Actually, you get to set two clocks, one for your Home City and one for a Visiting City. You can access World Clock through the Control Panel, but it's quicker to double tap on the time displayed in the "system tray" (lower right of the screen).

Hide the Taskbar for more room on the screen

If you want to add a little more viewable space to your screen you can hide the taskbar. Hold down the Alt key, tap on the task bar, then tap on "Properties," check the box labeled "Auto hide", and tap the OK button.

It's still there, but it's just hiding from you, letting you see more of the screen. Tap on the very bottom of the screen and the taskbar reappears..

Make "soft keyboard" larger on the Palm-size PC

The Palm-size PC comes with handwriting recognition capability (thanks to JOT). In addition, it comes with a "soft keyboard," which displays a little QWERTY keyboard on the bottom of the screen and lets you tap out your data entry. The keys are very small, and it's easy to miss the one you're aiming at. Fortunately, you can increase the size of the keys. From the Start menu, select Settings and then Input Panel. Make sure the "Current input method:" is listing "Keyboard." Then tap on the "Options" but-

Screen 4: The Palm-size PC can display a slightly larger "Soft Keyboard, making it easier to enter data into Palm-size PC applications.

ton, select the "Large keys" option and tap "OK" a couple of times. The keys are a little bigger and easier to tap on (see Screen 4).

Tap the "123" key located in the lower left of the soft keyboard and numbers and symbols are displayed. Tap on the "äü" key, located next to the "123" key, and common international characters from Western languages are displayed.

Synchronize items immediately

You can keep your PC Companion in its data cradle (or connected to your desktop PC via cable) all the time, with Windows

CE Services set to continuous synchronization. Whenever you make a change to your desktop version of Outlook, the change is immediately transferred to your PC Companion. If you have to leave your desk quickly, you grab your PC Companion and go, with all your data up to date.

The process is simple. Keep your PC Companion connected all the time, via serial cable or data cradle. Then follow these steps:

1. Open the Mobile Devices folder, select the icon for the appropriate PC Companion (if you have more than one),
2. Pull down the Tools menu and go into ActiveSync Options,
3. Check "automatically synchronize if data is out-of-date."

You may have to close down and re-start Mobile Devices to get the change to ActiveSync Options to be recognized. But once it is, changes to Tasks, Calendar, and Contacts on the desktop PC show up on the PC Companion almost immediately.

If you decide not to activate continuous synchronization, you can do a quick synchronization (of any connected PC Companion) by right clicking on the Windows CE Services tray icon and selecting Synchronize Now.

Backup hardcopy of Contacts

Not only do I keep my H/PC's Pocket Contacts synchronized with my desktop PC, I keep a printed out copy of Contacts in an old-fashion file folder, in a real file cabinet — just in case! The easiest way to do this is synchronize with your desktop PC, and print out the list from there. In Office 97 & 98's Outlook, you select Print from the File menu and go from there. The process is similar in other desktop PC contact managers.

You can do the same thing from Pocket Contacts on the H/PC. Connect up to a printer, select Print from the File menu, fill in the options and tap on the OK button.

Make a note and move on

When I'm working on an article, under a heavy deadline, I don't let anything stop me. If a piece of information is missing and I know where it's located, I'll get it quickly, drop it in, edit it down to size, and move on. If I don't know where it is, I'll leave a note in the body of the text (e.g., "xx get price and contact info from vendor xx") and move on. Sometimes, I'll open up Inbox, fire off a quick message to the vendor or the author of the article, and move on.

I don't have to change the way I do things much on my H/PC. Pocket Word and Excel don't have all the features of the desktop PC versions, but I don't really need them. I'll leave notes about missing information and fill in the blanks when I copy the document over to the desktop PC.

If I need to send someone a message, I do it when I think of it, from Inbox on the H/PC. Later, when I synchronize my H/PC with my desktop PC, the message gets sent.

Occasionally, but not often, I'll go up on the Web from the H/PC, to look for specific information from a vendor. But if it can wait, I make a note about it in the article I'm working on, or sometimes in Tasks, and move on.

PC COMPANIONS ONLINE

Tom's Year-End Top 10 Windows CE Websites

By Tom Gibson

Technical Editor, Handheld PC Magazine

Email: tom_gibson@thaddeus.com Web site: www.thaddeus.com

The year is drawing to an end, and we've seen a lot of activity in the Windows CE marketplace. We've seen the release of Windows CE versions 2.0 and 2.1, and new form factors such as the Palm-size PC, the Auto PC, and now the Handheld PC Pro. There has also been an online explosion of great Web sites devoted to Windows CE. I wanted give you an update on the top ten, the best of the best, the sites that I feel deserve to be on everyone's list of favorites. The truth is more than ten deserve to be on this list. I apologize if I leave your favorite off. Let me know about it.

members.aol.com/pdcchrisd/

Chris De Herrera's Windows CE site has just about everything you would want to know about Windows CE. Chris is an online consultant for AOL's Windows CE Forum, a columnist for Microsoft Comm Link, and a Microsoft Most Valuable Professional - Windows CE. Chris has FAQ (Frequently Asked Question) documents covering just about ever Windows CE question there is, from Active Sync and PC card Modems to Infrared and Network Clients. Chris is also

a contributing writer for *Handheld PC Magazine* (see page 15) and his Web site has links to the articles he has written for us and for Microsoft. This site is continually updated so make sure to stop back often.

www.craigtech.co.uk/hpc/

Craig Peacock also has a comprehensive, and continually updated site on a wide variety of Windows CE topics. He has an excellent section for Palm-size PC, lots of FAQs, tips, and articles that Craig has written. Craig has designed his site to be viewed with a desktop PC or on the H/PC with Pocket Internet Explorer. Craig also writes for *Handheld PC Magazine* (see page 26).

www.cemonster.com/

CEMonster is probably the most comprehensive source of freeware, shareware or demoware for Windows CE. The site, from the same folks who maintain Tucows, is very well organized, with a number of well-thought-out categories.

www.wincecity.com/

CECity is another very comprehensive

site that is updated regularly. Topics covered include software, hardware, accessories, reviews, support, tips, and links to other Windows CE sites. CECity has a very comprehensive message board section, covering software, hardware, bug reports, classified, wish lists, and more. They also have a special section for developers.

**[www.microsoft.com/
windowsce/default.asp](http://www.microsoft.com/windowsce/default.asp)**

This is Microsoft's Windows CE homepage and the place to get the latest news about the operating system, hardware and approved software, and more. There are links to separate pages for each PC Companion, Embedded systems and more. Microsoft has some great freeware available for download including Pocket Streets and PowerToys.

www.window sce.com/

HPC.net is one of the first Windows CE sites to come online and has kept their site up to date and very easy to maneuver around in. This is also the home of the Windows CE Talk mailing list, a must for anyone seeking

PhatWare Corporation specializes in software for the Handheld PC. By listening carefully to customer feedback, we have created products that fulfill our users' important needs and desires. Visit PhatWare's web site and try our products for 15 days absolutely FREE!

support from other users and developers. HPC.net has lots of links, news, downloads reviews and tips. Well worth going back to often.

www.mindspring.com/~awolters/pie/piehome.html

Abby's Pocket Internet Explorer Pages is where you can find links to PIE-friendly sites. Windows CE has Pocket Internet Explorer built in, so while you are online

with your PC Companion, stop here to get the most out of your experience.

www.mobilesoft.com/

MobileSoft is a site to go and download commercial software. If it was designed for Windows CE and is for sale, chances are you will find it here.

www.winceonline.com/

WinCEOnline is another great site for

news, tips, reviews and support. There is a section where you can buy software online and also download freeware/shareware/-demoware while you are here.

www.thaddeus.com

Home page for *Handheld PC Magazine*. You can go here to see the table of contents for all the issues we have published to date. You will also find a comprehensive listing of third party products available for your PC Companion.

Thomas Fessler is running a web-based survey on what games should be made for Windows CE. He is trying to develop an opinion from you Windows CE users out there to find out what kind of games you want to see. Thomas says he hopes to make a difference, so give him some response and I'll see you OnLine! ■

Value of Handheld PC - \$900.00 Value of Data in H/PC - Priceless Cost of Protecting Data - \$29.95

Your signature becomes the *only* key that will unlock your encrypted data, when you load SignCrypt® 2.0 into your H/PC.

This foolproof security system creates an encryption key from your signature which will drive the Data Encryption

Standard (DES). When you attempt encryption/decryption of stored data, SignCrypt requests you to write your signature on the face of the computer screen before enabling computer access. Once the signature is verified, SignCrypt creates the *key* which enables the DES routine to encrypt/decrypt the files.

A proprietary algorithm is used to convert your signature samples into a computerized profile template of your unique handwriting characteristics. These characteristics are then available for comparison with your real-time signature which you inscribe on the face of the screen. *Only* your "enrolled" signature will be verified - all others will be rejected.

Electronic Signature Verification

MOBILECHOICE 2WAY WIRELESS™ SERVICES

Mobile Solutions for Mobile Professionals

Stay in Touch with the People and Information Important to You

Have you ever needed to update price quotes while waiting for an appointment or tried to check inventory while negotiating with a client? How about updating orders inside an elevator or answering your e-mail while delayed in traffic? With IKON's MobileCHOICE Messenger software, a Windows CE device and a wireless data modem, you can do all this -- and much more -- using American Mobile's ARDIS network:

- ✕ Two-way wireless Internet e-mail
- ✕ 7x24 live operator messaging service
- ✕ Personal toll-free telephone number
- ✕ Wireless faxing
- ✕ Two-way paging

Wireless Data Solutions

IKON provides a secure, scalable platform for the cost-effective deployment of wireless business data solutions. Get important information to the people in your company that need it most - when they need it.

- ✕ Increase customer satisfaction by having the answer now!
- ✕ Send wireless queries to office databases and get answers now!
- ✕ Get updates and approvals to close the deal today
- ✕ Be notified of schedule changes and eliminate dead time
- ✕ Fax important documents anywhere

IKON
Office Solutions

WHO MAKES WINDOWS® CE WIRELESS?

We Do!

STAY IN TOUCH...

When you're on the go, you'll always be in touch with your e-mail with wireless e-mail by American Mobile for Windows CE.

GO MOBILE...

Because Windows CE Handheld PCs are powerful yet lightweight and easy to carry, adding wireless e-mail by American Mobile lets you keep in touch when you're stuck in traffic, waiting at the airport, in the middle of meetings - virtually anytime, anywhere.

PROMOTION

\$49.95/month
Unlimited Messages

YOUR COMPLETE COMMUNICATIONS SOLUTION:

American Mobile's ARDIS network is the nation's largest two-way wireless data network. Only the ARDIS network gives you all this:

- X** Availability in over 10,700 US cities and towns in all 50 United States, Puerto Rico and the Virgin Islands
- X** In-building coverage
- X** No long distance or roaming fees

IKON's MobileCHOICE Messenger software for Microsoft Windows CE, developed by IKON Office Solutions, provides:

- X** Two-way wireless Internet e-mail
- X** Paging Service to your H/PC*
- X** Wireless Faxing Service*

Motorola Personal Messenger 100D Wireless Modem Card. This powerful wireless communications device fits into the standard PC Card slot on your H/PC keeping you in touch no matter where you are.**

* Additional charges apply for faxing and paging services.

** One time activation charge is \$99/unit. Pricing is for airtime only. Windows CE device and modem sold separately. Other terms and pricing available. Call for details. Promotional pricing expires December 31, 1998. Terms and conditions subject to change without notice.

Call American Mobile at 1-800-494-1732
or visit our web site at www.ammobile.com

American Mobile

American Mobile's ARDIS network supports version 1.0 and 2.0 Windows CE devices from the following manufacturers:

Casio
Compaq
Hewlett Packard
Hitachi

LG Electronics
NEC
Phillips
Sharp

Picture This On Your CE

Now you can! — Only Image Expert™ CE Software lets you view, annotate and communicate digital images from almost anywhere with a Handheld PC.

Image Expert CE gives you the freedom and mobility to take pictures when you travel and email them to your office, clients or family. You can also add handwritten notes, voice and text annotations to your images and display them as slideshow presentations directly from your H/PC.

Image Expert CE, the first imaging application of its kind, works with JPEG and BMP images from most popular digital cameras, the Web or any other source and runs on any Windows® CE 2.0 H/PC.*
